

Transformations

Fivetran Services

Discover the power of Fivetran Services for seamless data transformations. Our expert team offers hands-on SQL development, migration, and guidance on dbt setup and modeling optimization. With our tailored packages, your implementation will be set up for success, bringing your data models to life with confidence.

Challenges with adopting a Transformations tool

As teams look to adopt modern cloud technologies, they can face difficulties moving from legacy or hand-coded transformations.

Time to implement

Implementing brand new data solutions takes time, delaying time to insight, business impact, and value.

Data team resourcing

Allocating data team resources to support new implementations often distracts from primary goals.

Lack of tool familiarity

New data solution implementations carry risk of data outage and implementation failure.

Initial lift & expansion

Difficult to get over the initial lift of implementation and migration to facilitate solution operationalization

Adoption approach

Accelerate your adoption of dbt through technical consultancy and hands-on assistance from Fivetran Solution Analysts.

Installation & implementation

Lay the foundations for successful adoption of dbt Core from installation and implementation of key components such as your Git repository and Fivetran integration to transformation development.

Enablement & future adoption

We will ensure you can continue to grow your dbt Core adoption through enablement on dbt core, Fivetran's data models and approaches to developing your own SQL logic.

Why Fivetran Services

Building the foundations

Where you don't have data models, transformations or dbt Core in place, Fivetran will get hands-on putting in place the foundations required for your move to the modern data stack

Facilitating your migration

Should you have existing models, transformations or a legacy transformation layer in place, Fivetran will get hands-on putting dbt foundations in place and migrating legacy transformations

Deliverable options

dbt Core setup

Assist in best-practice design of your Git repository and the structure of your dbt project.

Package installation

Guidance with best practices for installation and running off-the-shelf Fivetran pre-built dbt models.

Medallion architecture

Load raw data (bronze), transform it (silver), and create curated analytics-ready data (gold) while ensuring data quality and governance.

Legacy migration

Migration of existing SQL transformations or Stored Procedure executed by dbt Core.

Fivetran integration

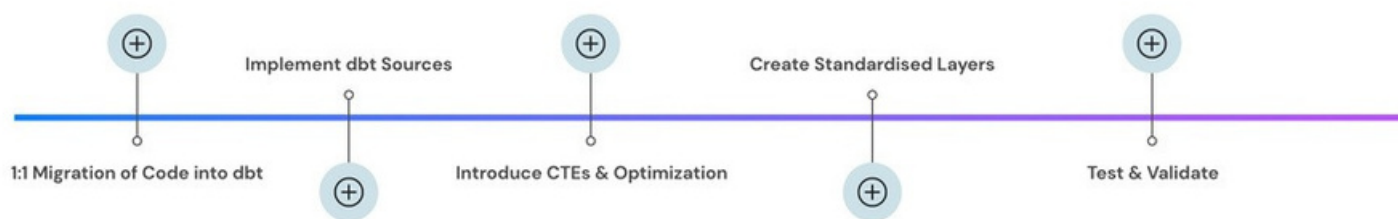

Facilitate the integration of your Git repository with the Fivetran platform.

Enablement & training

Own your modern transformation layer with enablement and collateral delivered by Fivetran.

Migration steps

Utilize a standardized approach to successfully migrating away from existing tooling.

Flexible plans to suit your business needs
