

Fully managed, end-to-end ELT for real-time analytics

Harness the power of Fivetran and dbt cloud to securely ingest data from any source and seamlessly transform it to accelerate insights.

The dynamic duo of Fivetran and dbt labs helps businesses unlock the full potential of their data. Fivetran automates data movement by securely ingesting data from hundreds of sources into your destination in near real-time. dbt cloud transforms this data post-load, making it analytics-ready and enabling teams to derive actionable insights quicker.

Together, Fivetran + dbt labs provide

- **Optimized efficiency:** Automate the building and maintenance of data pipelines, freeing up your team's time to focus on driving analysis and deriving insights.
- **Reduce computational costs:** Fivetran not only eliminates the need for manual processes but also optimizes operations by running only the relevant dbt jobs.
- **Improved data access:** Centralize data from across the organization into a single source of truth, prioritizing governance and security to ensure data integrity and compliance.
- **Enhanced data quality:** Automate data validation and cleaning processes, delivering accurate and reliable data for confident decision-making.

Fivetran dbt Cloud orchestration:

Start automating your data pipeline today with Fivetran's integration with dbt Cloud. This integration triggers dbt Cloud jobs upon successful data syncs, ensuring downstream tables and insights stay current—eliminating redundant transformations and unnecessary compute costs. Data teams save time by removing the need for manual orchestration. How it works:

- Build jobs in dbt Cloud
- Connect your dbt Cloud account to Fivetran
- Integrate dbt Cloud jobs with Fivetran connector syncs
