

Fivetran data movement platform end-to-end security

The most secure automated data movement platform, Fivetran allows you to move all your data with total peace of mind.

Risks of data breaches are increasing as more regulatory compliance is introduced. This exposes organizations to greater financial and reputational damage. Security teams need to protect business and customer data to stay compliant and scale securely.

Security leaders can off-load the security headache to us when it comes to protecting your data in-flight. Data teams can spend less time worrying about data compliance, and spend more time on high-value add data activities.

Secure, reliable data integration

Gain peace of mind that your in-flight data is protected by the most secure automated data movement platform.

Compliance and transparency

Ensure safe data handling and make sure your data practices meet internal and external security requirements and governance policies.

Controlled and secure data access

Eliminate the risk of unauthorized data usage to ensure only those who are trusted with confidential data are able to access it.

Fully-managed and cloud hosted

Fivetran's SaaS offering comes with the most security certifications and baked-in security best practices.

Self-hosted or in the cloud

Self-host Fivetran pipelines in your own environment making Fivetran as secure as your existing infrastructure..

Select the right plan for your data protection needs

Free	Standard	Enterprise
Baseline security features: • 10 users • 700+ fully-managed data sources • Pre-built data models • User permissions for accounts and destinations • SOC 2 Type II and ISO 27001 certifications • Select data processing geography (US, EU, +) • 24/7 global support • Column blocking and hashing • Automatic schema migrations	Everything in Starter, plus: • Unlimited users • Fully-managed database connectors • SSH tunnels for encryption • Reverse SSH tunnels (annual contract only) • SLA for system uptime • Access to Fivetran's Rest API	Everything in Standard, plus: • 1-minute syncs • Enterprise database connectors • Custom roles • Team/Organization assigned user roles • SCIM provisioning • VPN tunnels for advanced security • Pick cloud provider (GCP, AWS or Azure) • Multiple subsidiaries support • SLA for 1-hour support response • SLA for data delivery • Support for Protected Health Information • Metadata sharing • Send logs to external services • Hybrid deployment options
Business Critical		
Everything in Enterprise, plus: • Operate Fivetran in chosen cloud region (e.g. AWS us-east-2) • Host Fivetran on AWS GovCloud with optional US only support • Private Networking with AWS PrivateLink, Azure Private Link or Google Private Service Connect • PCI DSS Level 1 certification • HITRUST certification • Customer-managed keys for encryption
