

Custom connectors

Fivetran Services

Fivetran Services packages ensure your implementation is set up for success. Wherever you are on your data platform modernization journey, we can help you deliver value immediately with Fivetran expert engineering resources and support.

Where Fivetran doesn't natively support your data source, we have several techniques for building you a custom connector to get your data moving.

Custom connector implementation

Benefits of Fivetran Services

Optimize your architecture and simplify technical complexity

Accelerate time to value with zero overhead

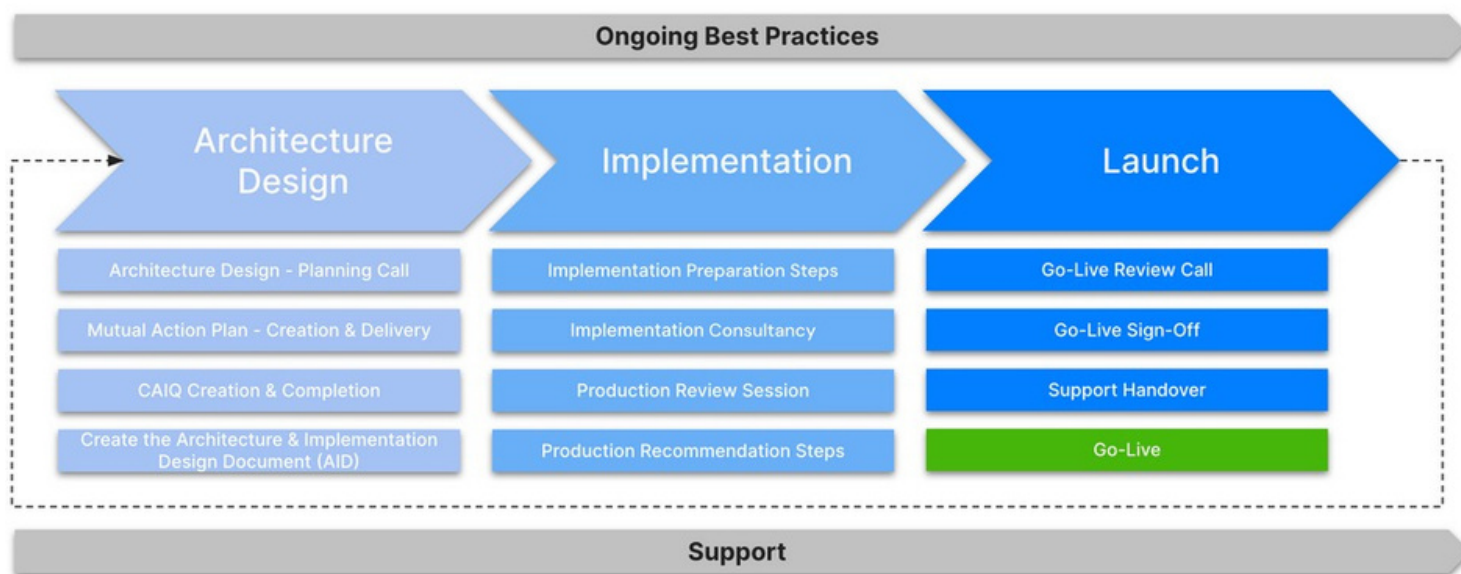

Enablement for your teams to support your infrastructure

Accelerate methodology

Fivetran employs our Accelerate Methodology for Services work to ensure successful project implementation. You can learn more about our methodology and key outcomes by reaching out to your account representative.

Depending on the support you need, Fivetran will work with you to customize your service. In general, we will run a (1) discovery phase to review and analyze your architecture, (2) design a solution that is right for your business, develop this and test it, and (3) launch the solution and enable your internal teams for ongoing best practices and maintenance.

One platform for every data source

Fivetran offers Services packages so you can choose the right option for your business. Our team can help you determine how many hours you need and create a statement of work for your use case.

Services packages				
Term	X-small	Medium	Large	X-Large
12 months	30 hours	60 hours	90 hours	120 hours
