PRO DVX

ProDEPLOY

Set up once.
Roll out with confidence.

Prepare ProDVX Android devices with the right apps, content and settings in one repeatable flow.

Android deployment utility

Make your software easier to deploy.

The easier your software is to deploy, the easier it becomes to include it in a project.

With ProDEPLOY, you can make your application available as part of a repeatable ProDVX deployment flow. Integrators can combine it with the content and supported settings a project needs, without starting the installation process from scratch for every device.

Less manual work. More consistency. A smoother route from your software to the device.

3 Make deployment easier for integrators →

4 Everything your deployment needs →

5 ProDEPLOY + ProMGR →

6 Get started →

1

Your software. Our devices. Less in between.

Getting software onto a device should not be the complicated part of a project.

ProDEPLOY helps remove repetitive setup steps by making your application part of a predefined deployment flow for ProDVX Android devices.

You make your application available to ProDEPLOY.

ProDEPLOY brings the deployment together.

Integrators deploy it on the device.

No need to start the installation process from scratch for every project.

2

PRO DVX

Set it up once. Deploy it again and again.

Instead of preparing every device from scratch, create the deployment setup once and give integrators a repeatable way to get devices ready.

1

Add your application

Register your application in ProDEPLOY and link the required files hosted in your own accessible environment.

2

Build the deployment setup

Bring together your application, content, supported Android settings, ProMGR Kiosk configurations and other supported resources required for the project.

3

Start the deployment

On the device, the integrator opens ProDEPLOY and enters the deployment code or uses NFC on supported devices.

4

ProDEPLOY takes it from there

The required files are retrieved, applications are installed and supported predefined settings are applied.

Less repetition for the integrator. The same starting point for every device.

3

PRO DVX

Make life easier for the integrator.

Save time on every installation
Reduce repetitive installation steps by including your application directly in the deployment flow.

Keep every rollout aligned
Help integrators work with the intended application version, content and setup across the project.

Stay in control of your software
Your application files remain hosted in your own environment. ProDEPLOY retrieves them when they are needed for deployment.

Scale without rebuilding the process
Whether the project includes a few devices or a larger rollout, the same deployment approach can be repeated device after device.

Make your software easier to work with.
And easier to include in ProDVX projects.

4

PRO DVX

Everything your deployment needs. In one go.

Bring the different elements of your deployment together so integrators can prepare a ProDVX Android device in one consistent flow.

Applications
Your software and other required applications

Android settings
Apply supported device settings through StartupWizard.

Application versions
Deploy the intended application version for the project.

ProMGR kiosk settings
Existing ProMGR kiosk configurations, where required

Content
Additional files and resources

Support tools
Applications used for support or troubleshooting.

One package. One consistent starting point.

5

PRO DVX

Deployment first. Management next.

ProDEPLOY
Initial deployment

- Designed for deployment and provisioning
- Started directly on the device
- Activated with a deployment code or NFC
- Physical interaction with the device is required
- Built for repeatable device preparation

Best for: getting devices consistently configured and ready for use.

ProMGR
Ongoing management

Continue configuring and managing devices once they are up and running.

- Kiosk and device configuration
- Ongoing device management
- Remote functionality through a paid service.

Best for: projects that require continued configuration, support or remote management after deployment.

Better together

Already working with ProMGR? Include your existing ProMGR Kiosk configuration in the ProDEPLOY package together with the required applications and supported settings.

Prepare everything in one deployment flow. Then manage the device throughout the project when needed.

6

PRO DVX

Ready to make deployment easier?

Making your application available through ProDEPLOY only takes a few steps.

1 **Request your access to ProDEPLOY**

Request access to the platform. A ProDEPLOY account is required to get started.

2 **Register your application**

Add your application details and link the required resources hosted in your own environment.

3 **Make it available for deployment**

Your application can now be included in ProDEPLOY deployment packages for ProDVX Android devices.

ProDEPLOY is free to use. Request access now

PRO DVX

Your software. Ready for smoother deployment.

Make your application available through ProDEPLOY and give integrators a simpler, more consistent way to prepare ProDVX Android devices.

Built to make working together easier.
