Business Support Overview

Life Sciences & Health programs

How to read this Business Support Overview

This Business Support Overview overview was developed by Health Holland and brings together national and regional programs for startups and scale-ups in the Life Sciences & Health sector. It is intended for entrepreneurs as well as organizations, companies and partners involved in the startup ecosystem.

The overview provides a quick insight into the support that is available, where each program is offered and at which stage of development it may be relevant.

Which programs are included?

The overview includes programs lasting at least three days that help startups and scale-ups accelerate their development within the Life Sciences & Health ecosystem.

These programs may, for example, provide support with:

- exploring and validating an idea;
- developing a product, service or business model;
- conducting pilots or real-world testing;
- gaining access to expertise, facilities and networks;
- preparing for funding or investment;
- market entry, commercialization and growth.

This is *not* a funding or grant overview. Some programs may include financial support, vouchers or prize money that can be invested in the further development of a startup. However, financial support is not the main purpose of these programs. They are included primarily because of the guidance, expertise, networks and development opportunities they provide.

National and regional programs

The program overview consists of a national overview and several regional overviews.
National programs are accessible across multiple regions or are offered at different locations in the Netherlands. Regional programs are linked to a specific province, region, city, campus or local ecosystem, but participation is not always limited to companies based there. Eligibility varies by program, so please contact the organization listed for details.

What information is included on a program card?

Each program card follows the same structure. From top to bottom, you will find:

- the name of the program;
- the location and the organizations involved in or responsible for delivering the program;
- the duration of the program;
- a brief description of its content and purpose;
- an indication of the development stage or stages for which the program is suitable;
- an indication of the participation costs.

For more detailed information about eligibility requirements, application periods, selection criteria, costs and start dates, please consult the organizations listed on the program card.

Domains and colour coding

The colour of a program card and its corresponding connecting line indicates the domain on which the program primarily focuses.

Teal
MedTech, HealthTech and DeepTech. This includes, for example, medical technology, digital health, healthcare innovation, diagnostics and technological applications for health and healthcare.
Purple
Biotech and Pharma. This includes, for example, biotechnology, drug development, regenerative medicine and pharmaceutical innovation.
Orange
A combination of both domains. These programs are relevant to MedTech, HealthTech and DeepTech as well as Biotech and Pharma.
Grey
General startup and scale-up programs. These programs are not exclusively focused on Life Sciences & Health and are also open to startups from other sectors. They have been included because a relevant part of their offering is suitable for Life Sciences & Health startups.

Development stage

The symbols at the bottom of each program card indicate the development stage at which a startup or scale-up may be eligible to participate. A program may be suitable for one development stage or for multiple stages.
Pre-seed
You are in the idea or research stage. You may, for example, be working to validate a problem, solution, technology or initial business case.
Startup
You have established a company or are further developing your product, service or business model. You may, for example, be working on pilots, acquiring your first customers, validating the market or securing funding.
Scale-up
Your company has a validated proposition and is focused on further growth, commercialization, market expansion or international scaling.

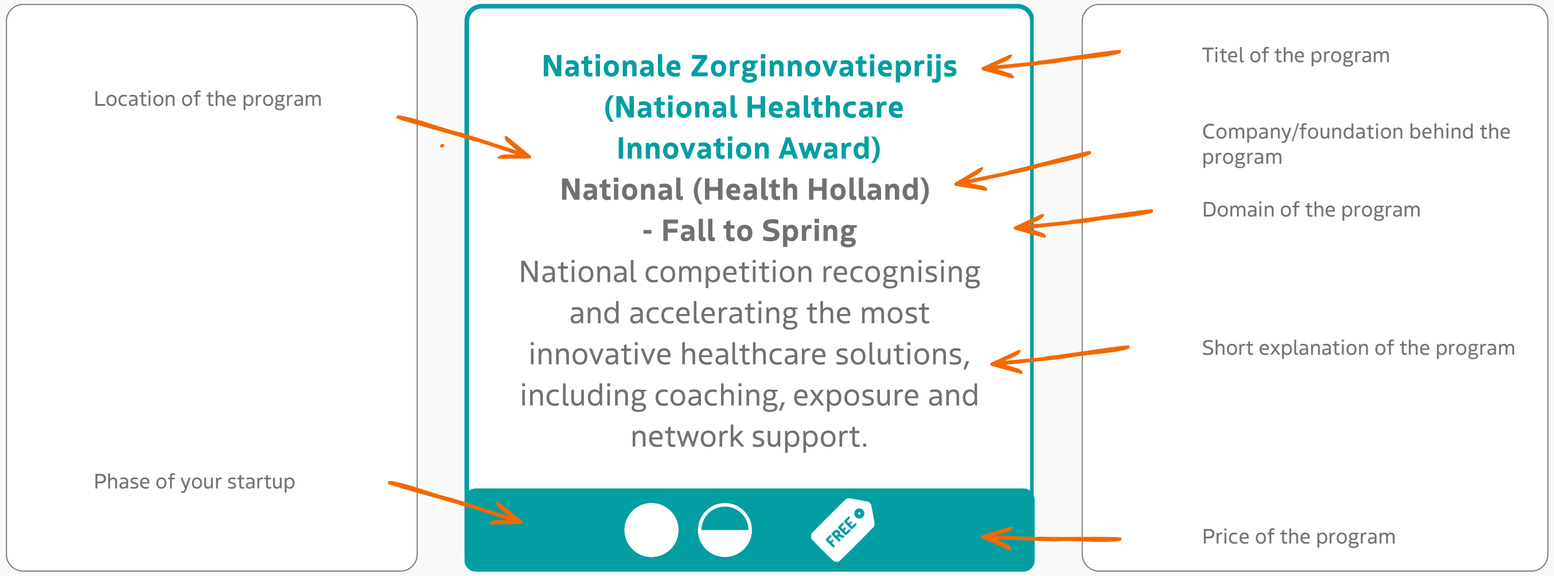

Cost indication

At the bottom of each program card, you will find an indication of the potential participation costs.
Free
As far as is known, there are no participation costs associated with the program.
€
A participation fee of up to €1,000 generally applies.
€€
A participation fee of more than €1,000 generally applies.

The cost indication is based on the information available at the time of the most recent update. Costs may vary by edition, participant or individual component of the program. Always consult the organizing party for the latest costs, terms and conditions.

Venture Challenge
National (Health Holland, NWO, ministry economic affairs) - 10 weeks
Intensive program supporting life sciences and health startups in developing a business plan, validating their proposition and preparing for investment culminating in a €25,000 award.

Animal-free Venture Challenge
National (Proefdiervrij, GameChanger Challenge & Stichting Universitas) - 10 weeks
Helps researchers turn animal-free Life Sciences innovations into investable ventures through business training, coaching and pitching.

Health Impact Accelerator (HIA)
National (Health Holland) - 10 weeks
Intensive program supporting health startups in developing a sharp strategy and making the business investor-ready culminating in a €10,000 award.

TMC Netherlands BioBridge Program
National/USA (Invest International, RVO, Health Holland, TFHC & ROM-Nederland) - 6 months
US market-entry program helping Dutch MedTech startups navigate regulation, reimbursement, clinical adoption and commercial growth.

TTT MedTech (Thematic Technology Transfer MedTech)
National (TTO collective + Magnolia MedTech Fund I managed by Thuja Capital) - up to one year
Dutch TTO program supporting early validation of technology, market and business ideas with €25,000 vouchers and potential Magnolia MedTech follow-up.

Custom Support Program
National (Stichting MedtechPartners) - 40 to 80 hours
Tailored support for medtech and digital health startups and scale-ups (TRL 4–8), providing expert guidance on investment readiness, product development, regulation and market entry.

Nationale Zorginnovatieprijs (National Healthcare Innovation Award)
National (Health Holland) - Fall to spring
National competition recognizing and accelerating the most innovative healthcare solutions, including coaching, exposure and network support.

Health Tech Accelerator
National (ROM-Nederland, regional development agencies & Invest-NL) - 6 months
Accelerator helping health-tech startups reach product-market fit and commercial growth through coaching and peer learning.

TTT InFECT-TT
National (InFECT-NL, AUMC, UMCU, Radboudumc, LUMC & UMCG) - 6 years
Dutch TTO program helping entrepreneurial researchers protect and validate their technology and become investment-ready through patent, validation and spin-off support vouchers of €25,000-€32,000.

BioBusiness Summer School
National (Hyphen projects) - 5 days
Intensive summer school covering business, IP, regulatory affairs and entrepreneurship for life sciences researchers and entrepreneurs.

BioBusiness Masterclass
National (Hyphen projects) - 5 modules
Hands-on mini-MBA delivering comprehensive training in strategy, IP, commercial strategy & sales, reimbursement, finance, business development and leadership, culminating in a €25,000 award.

Faculty of Impact
National (Faculty of Impact - Universities of the Netherlands, NWO, Techleap) - 24 months
Full-time fellowship helping LSH researchers turn research into a venture through training, coaching and validation.

Academic Startup Competition
National (Techleap, Universities of the Netherlands & partners) - 6 months
Acceleration program for promising academic startups, offering expert guidance, peer learning and international exposure.

NL Startup Competition
National (NL Startup Competition & partners) - 2 workshops + final
National startup competition offering expert sessions, pitching and network access, including a dedicated Health & Wellbeing category.

Rise program
National (Techleap) - 8 weeks
Scaling program for ambitious scale-up founders, focused on international growth, capital, go-to-market, product, talent and operations.

Pole Position Program
National (Techleap) - 6 weeks
Scaling program for established deeptech founders, focused on market access, scalable business models, leadership and funding.
