## Assault After Hours: Getting Medical Help After the School Day Ends

### The Challenge

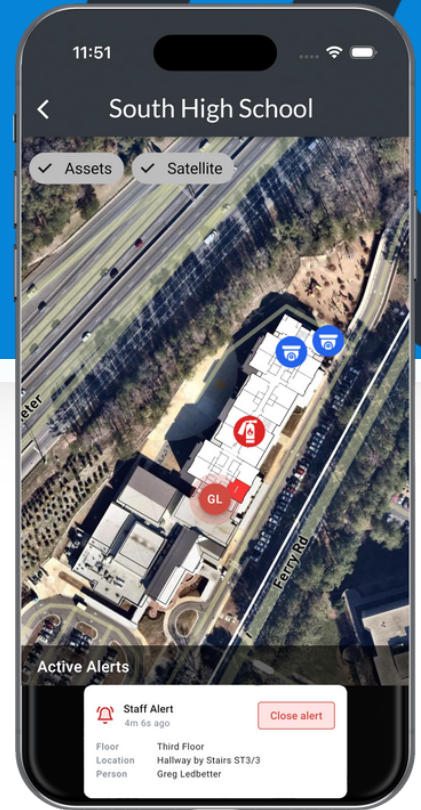

- Following a series of violent incidents, Clark County School District recognized the urgent need to improve campus safety.
- A key goal was identifying a safety solution that would enable staff to quickly get help during emergencies.

### The Solution

- The district implemented the CrisisAlert™ wearable panic button so employees could get help in an emergency **no matter where or when they were on campus**.
- On October 24, 2022, after school hours, a security monitor at Rancho High School was assaulted in a suspected robbery.
- Nearby staff used their CrisisAlert badges to immediately request help to the scene—only a week after the badges had been distributed. **Together, the training and technology had led to a better outcome.**

### The Results

- First responders and CCSD PD provided a rapid response, and the campus security monitor was transported to a nearby hospital following the attack.
- He was later discharged the following morning.

There were multiple staff members who pressed a button and there was an immediate response. And that quickness of response is something that made me feel much safer. And I'm glad to have this device now...We just received [CrisisAlert] last week, and we had a major incident on campus within a week—that shows just how important this response mechanism [is].

Reuben D'Silva, Rancho High School  
teacher, Clark County School District, NV
