**WE ARE THE DRIVING FORCE
BEHIND THE WORLD’S MOST
INSPIRING OUTDOOR SPACES.**

**FROM EDGING, THROUGH
SURFACES TO FURNITURE AND
PLANTERS, WE AIM TO ADD
AESTHETIC APPEAL TO LANDSCAPE
SCHEMES, FROM TOP TO BOTTOM.**

How do we do it?

1

LANDSCAPE EDGING

Kinley is the ideal solution for defining edges in landscape and garden spaces. With great strength and durability, our metal landscape edging ensures low maintenance and cost benefits across its long lifespan.

Kinley is renowned for its discreet and smart design, as well as simple installation. Steel and aluminium edging has become the first choice

in landscape creation. Its strength, flexibility, durability and lightness contribute to simple, easy installation and minimal maintenance. With flexible metal edging enabling easy manual formation of curves and gradients, the time-consuming base preparation associated with traditional landscape border edging is eliminated.

AluExcel

AluExcel is Kinley's flagship aluminium landscape edging, offering an unbeatable combination of durability, flexibility and aesthetic appeal.

For practical, attractive outdoor surfaces, AluExcel leads the field in durable, creative aluminium landscape edging.

ADVANTAGES

- Highest quality, durable aluminium alloy won't rust
- Create clean curves or straight lines by hand
- Fast, simple installation saves time and money
- Strong base with tapered top edge gives stability to a refined design
- Works between all hard/soft surface types

Perfect for:

- Blocks and pavers
- Asphalt and tarmac
- Wet-pour rubber and other safety surfacing

- Resin-bound gravel
- Imprinted and plain concrete

Suitable for:

- Public realm
- Pathways
- Play areas
- Sports areas
- Patios

Fort

Strong, robust roll-top corrosion-resistant steel edging for hard landscapes.

ADVANTAGES

- Highly resistant to atmospheric corrosion and requires little maintenance
- Made from sustainable materials and 100% recyclable
- Rolled top means no sharp edges
- A sliding connection plate creates a seamless face with no overlap
- Flexible and rigid options which can be cut and bent to shape pathways or isolate areas in high traffic spaces

Visit our [website](#) to see our full range

Perfect for:

- Public spaces and plaza areas
- Raised planting edging
- Bespoke creative intricate shapes
- Flexible steel edging

Suitable for:

- Public spaces
- Raised planting areas
- Pathways
- Patios

Case Study Endeavour School

PRODUCTS USED:
Urban

“Urban provided the perfect solution for producing the raised CorTen edgings required for the school’s courtyard. Kinley System’s technical back-up, fabrication quality and accuracy were all exemplary, making a difficult design achievable without fuss or delay.”

COLIN LORD
SENIOR LANDSCAPE ARCHITECT
HAMPSHIRE COUNTY COUNCIL

Endeavour School is a recent development in Andover, Hampshire, UK.

The Urban steel edging was used to create a clean and crisp edge to the outer edge of the rubber play surfacing. Kinley has supplied steel landscape edging and pre-formed its Urban CorTen steel landscape edging to provide bespoke profiles between paving, synthetic turf, planting and play areas at the new Endeavour Primary School development in Andover, Hampshire.

2

RAAFT® SUPPORT STRUCTURE

A good-quality screwless support structure is key to creating a sturdy, safe terraced area.

Our range of height adjustable decking and paving pedestals are easy to use, engineered for high performance, and come together seamlessly with all RAAFT® Terrace System components.

Preventa® Metal Adjustable Pedestals and Accessories

Our Adjustable Steel Pedestals provide ideal support for RAAFT® Fire-rated Terrace System (B Roof(t4)), reducing costs. They're height-adjustable and made of zinc-coated steel, offering six height options, even load distribution, and stability.

The steel pedestals work with RAAFT® Aluminium Joists and are non-combustible and corrosion-resistant. Pedestal Accessories are available for easier installation on various surfaces.

Preventa® Aluminium Joists And Accessories

RAAFT® Aluminium Joists provide a versatile platform for decking, paving, and other surfaces. They significantly reduce the need for pedestals, expediting installation. The 30mm Joist suits shallow build-ups or limited headspace, creating a seamless indoor-to-outdoor landscape.

Available too in 50mm and in a cost-effective external finish. Additionally, our Joist Accessories complement RAAFT® Joists, simplifying the installation of various surfaces.

Case Study

135 Park Street

Project Partners:

Landscape Architect:

PAD Landscapes

Main Contractor:

Kier Group plc

Product Installer:

Tilbury Contracts Limited

135 Park Street, also known as TIDE Bankside, is a 12-storey sustainable office development in London's South Bank, replacing the former Emerson warehouse and contributing to the area's transformation into a modern cultural and commercial hub.

With 148,500 square feet of space divided into Grade A offices, affordable workshops and retail units, the development was designed to be net-zero-carbon with BREEAM Outstanding and 5-star NABERS ratings.

3

SURFACES

Our surfaces include Atria® Porcelain Tiles, Farrino Porcelain Decking and Vita Resin. They are available in many styles, colours, effects and finishes with each option coming with a host of benefits..

All installed on the Preventa metal, non-combustible terrace support system.

Atria® Porcelain Tiles

Easily installed, you can create indoor and outdoor spaces for people to enjoy. Explore our range of porcelain tiles, including new colours, sizes and styles.

Imagine what you can design.

Vita Resin

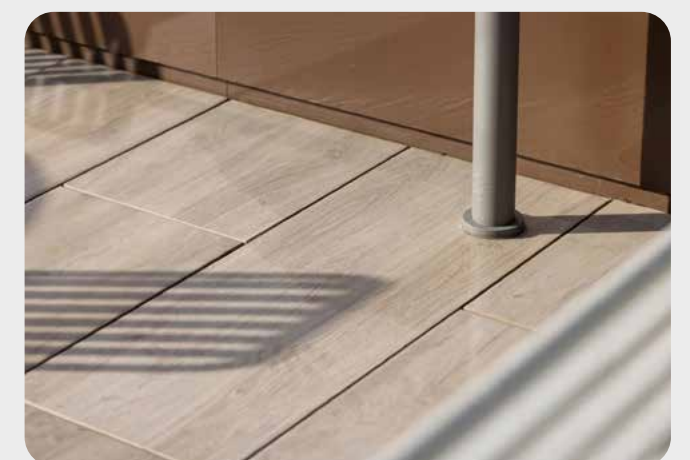

Available in a range of colours and blends, the gravel surface is extremely hard wearing and provides visually stunning finishes for your roof terrace.

Vita resin is applied by mixing coloured aggregates with resin to form a level, permeable bound gravel system which is SuDs compliant.

Farrino® Porcelain Decking

The Farrino® decking is a high-performance porcelain decking surface for your terrace or balcony.

A highly resistant and long-lasting product which passes the BroofT4 British fire rating and incorporates a wind tie-down system.

Artificial Grass

The Drapers Yard redevelopment project involved converting a vacant building in Leeds's historic industrial quarter into a medical facility, creating a 100-bed clinic, pharmacy and almost 300 highly-skilled scientific and healthcare jobs in the city.

Project: **Drapers Yard Leeds**

Landscape Architect:
Oobe Landscape Architects

Main Contractor:
Overbury plc

Product Installer:
Palmer Landscapes Ltd

Rubber Crumb

Rubber crumb was specified across the play areas at St Christopher's School to give a continuous, impact-absorbing surface. AluExcel edging provides the restraint that holds the wetpour to a clean line against the adjacent paving/grass, preventing the edge lift and fraying that usually shortens the life of a rubber-bound surface.

Project: **St. Christopher's School**

Case Study Warley Podiam

Warley Podiam is a landscaped deck built over structure, creating gardens, lawns and social space above ground level. The scheme delivers a genuine public landscape on a slab that was never intended to carry one.

Building over structure meant working within a shallow build-up and strict load limits, with no tolerance for standing water on the waterproofing. AluExcel edging holds the resin-bound paths to a crisp line against the lawn and planting, keeping levels flush and preventing the edge breakdown that shortens the life of a bound surface.

4

FURNITURE & PLANTERS

Kinley's outdoor terrace furniture ranges have been designed to enhance and add value to any Kinley roof terrace or balcony project.

They are literally 'add-ons', which will turn a roof space into a living area. The rooftop furniture's clever engineering facilitates easy location and direct fixing into the support structure, and will look elegant for years to come, whilst requiring minimal maintenance.

With a choice of standard and bespoke options, our steel planters are a robust solution for modern roof terraces, podiums, public areas and private gardens. Add dimension to your space with roof terrace planters that seamlessly integrate with our modular terrace system.

FURNITURE

Pergola

Our pergolas are available in six pre-fabricated dimensions, making it easy to find the perfect fit to elevate your rooftop space.

Designed with both style and strength in mind, each structure is built to last, offering long-term durability and timeless appeal in any outdoor setting.

- Louvers Rotate 150°
- Integrated Guttering
- Superstrong Alu Construction
- Re-inforced Framework
- No Visible Fixings
- Remote Controlled
- Windproof Side Screens
- Lighting & Heating

Flow

Stylish and contemporary, yet robust, modular units designed to work together to offer the design flexibility for you to create multiple configurations.

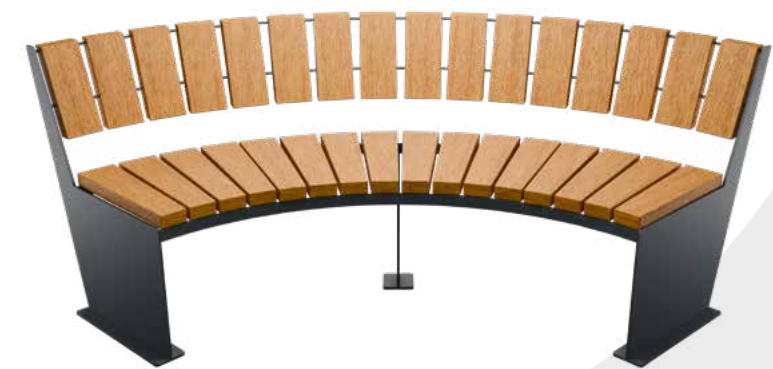

Four different units, including benching, planters and storage. The Flow range simply fixes directly into the RAAFT® support system.

- Smart contemporary design
- Easy and quick to install
- Modular units - multiple designs
- Fixes into RAAFT® terrace system
- Corten steel and powder coated finished available
- FSC accredited timber

Anello

A modular outdoor seating and table system built around curved and straight units. Anello's five variants — Concave, Convex, Straight, Picnic, and Table — combine to form circular gathering spaces, sweeping seating runs, or formal dining settings, all within one coordinated design language.

- Five variants form a complete modular seating system
- Curved units (Concave and Convex) build circles and sweeping arcs
- Straight, Picnic, and Table units extend the family to conventional settings
- Coordinated design language across all variants
- Steel-and-timber construction matched to the wider Kinley range
- UK-manufactured
- Specification details to be confirmed at order stage
- Coordinates with wider Kinley street furniture and edging

Ruvio

A modular outdoor system combining stools, seats, benches, planters, and tables in a single coordinated language. Ruvio scales from single stool to triple-module bench-with-backrest, with matching planters in single, double, and triple configurations – designed to outfit an entire scheme from one specification.

Visit our [website](#) to see our full range

PLANTERS

HiGrade

HiGrade walls are premium quality steel planter panels that are available in various sizes to suit a wide range of designs, available in corten or powder-coated to any RAL colour.

The panel systems are pre-formed to straight standard sizes required for your project and are easy to handle and install on site. The panels have a unique folded design that ensures a strong retaining structure, but also keeps weight to a minimum making this an ideal choice for roof terrace applications.

Our Timber Benches can easily be incorporated into Straight Planter Systems which add highly desirable relaxation areas.

Integrated Planter Seating

Achieve the perfect balance of design and functionality with our FSC-accredited timber benches.

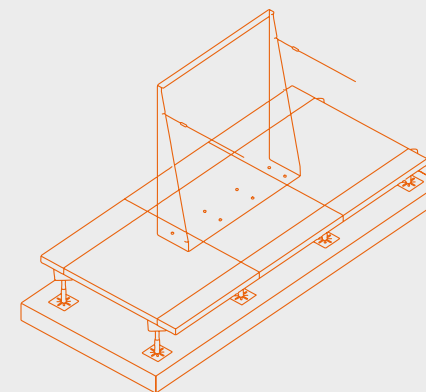

Choose from a range of styles featuring seamlessly integrated seating, with options designed to match and complement your full RAAFT® terrace system. Benches are available in cantilevered, top-mounted, or free-standing configurations, with both short-slat and long-slat designs.

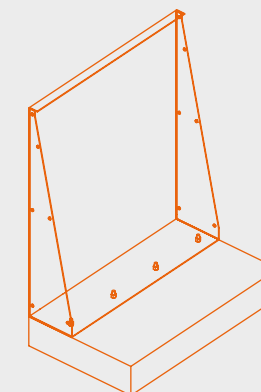

Planterline Bespoke

Enhance your outdoor space with a refined, elegant finish. The Planterline Bespoke range offers a wide selection of tailored options designed to meet your exact requirements.

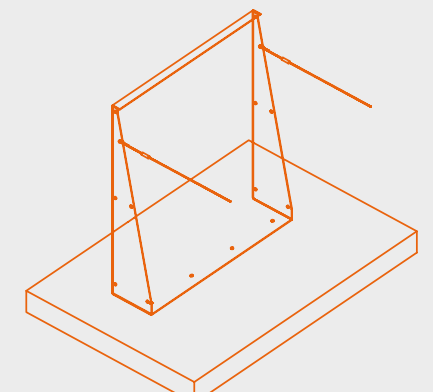

Each piece can be adapted to nearly any configuration or style you envision. Our team is here to support you every step of the way—get in touch to explore what's possible.

Case Study Tower Bridge Court

Project Partners:

Landscape Architect:

Camlins Landscape Architects

Main Contractor:

Willmott Dixon

Product Installer:

Skidmores of Hertford Ltd

“Product knowledge, the finished product and the way that they go from stage three design, all the way through to construction issue, they’re there to help. It’s just a good process.”

KYLE GRAY
COMMERCIAL MANAGER
SKIDMORES OF HERTFORD LTD

The rooftop terraces at TBC.London span an impressive 4,918 square feet across Floors 7 and 8. They were designed with a strong focus on occupier experience and connection to the surrounding cityscape.

TBC.London is a prominent riverside development situated on the southern bank of the Thames, offering an iconic view of Tower Bridge and the City of London. This sustainable refurbishment, extension and re-purposing of an existing building plays a key role in enhancing the Tower Bridge Conservation Area.

Visit our website for more case studies

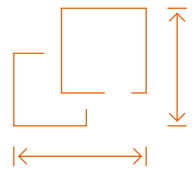

THE 5 STEP PROCESS

Our integrated terrace system is engineered using sustainable, recyclable materials designed to perform seamlessly as a complete solution.

Each project begins with a durable, Class A fire-rated structural base, followed by a curated selection of premium decking and tile options tailored to your design objectives. The system is

then elevated with architecturally refined planters that introduce natural balance and visual impact.

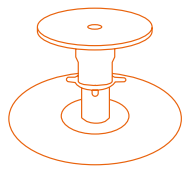

Backed by expert guidance at every stage, our team partners with you to deliver terrace projects that meet the highest standards of performance, efficiency, and design excellence.

1

DEFINE YOUR SPACE

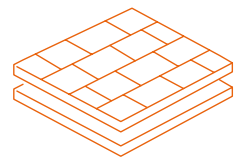

We help shape your vision, considering the space, its purpose and all the practical requirements involved to create a design that works.

2

BUILDING A GOOD BASE

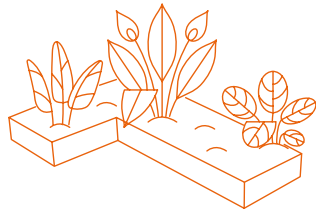

A good quality support structure is key to creating a sturdy, safe terraced area. As roofs are rarely flat or level, our RAAFT® system is the perfect solution.

3

CHOOSING YOUR SURFACE

Our surfaces include a variety of finishes across porcelain, natural stone, resin, rubber crumb, grass and many more, available in a number of different styles, colours, effects, and finishes.

4

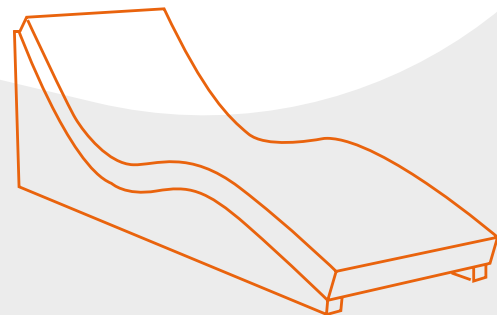

ADDING DIMENSION

A space can easily be transformed into a destination, with layers of interest and a feeling of permeance through adding planters and plants.

5

FURNISHING YOUR SPACE

The right furniture brings your space to life, creating comfort, character and a sense of purpose. Choose from a range of styles, materials and finishes to complement your design.

BENEFITS OF THE RAAFT® ROOF TERRACE SYSTEM

ANTI-SLIP

Atria is a safe, non-slip terrace. It has a slip resistance of R11 when tested to DIN 51130 (the Ramp Test) and Class 3 when tested to UNE-ENV 12633: 2003 (the Pendulum Test).

QUICK TO INSTALL

The RAAFT® support structure is quick and easy to install without the need for specialist tools. A series of innovative clips hold the surfaces in place and can be quickly removed to allow for access and essential maintenance.

DESIGN FREEDOM

Atria® and Farrino are available in a variety of aesthetically-pleasing colours, effects and finishes. The roof terrace system is further complemented by a range of beautiful steel planters and exciting roof-top furniture.

NON-COMBUSTIBLE

Class A Fire-rated Pedestals and Joists (all core components in the fire-rated terrace system) through to the planters are made from BRoof(t4) materials.

ABOUT US

Backed by more than 10 years of innovation and design excellence, Kinley has become the UK's trusted standard-setter for high-performance landscape edging.

Kinley designs and manufactures hard landscape products for the public realm: metal edging, surfaces, support systems, planters and a full street furniture range. Everything we make is produced under our own roof, which means we control quality, lead times, and the detail that turns a drawing into a built scheme.

Bringing Kinley and RAAFT® together has widened that range considerably, so a single specification can now cover far more of the landscape than either business could serve alone.

We work with landscape architects from concept through to site. That means DWG and NBS-ready details, CPD sessions delivered in your studio,

and a technical team that will take a call about a tricky level change or an awkward radius. We know that a specification only counts if it survives the journey to installation, so we stay involved after the drawings are issued and hold the detail through to handover.

UK MANUFACTURING

At our location in East Sussex, we manufacture all our products to extremely high specifications and quality control standards, with rapid delivery of small batch production being one of our key customer benefits.

Kinley is a group company of Kinley Systems Limited and when the need for landscape edging was recognised by the founders of Kinley, our objective soon was to manufacture in the United Kingdom, for several reasons.

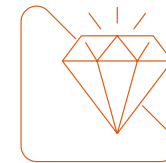

- Reduce transport, improve our carbon footprint and our sourcing flexibility
- We can develop and improve products according to the UK market demands
- Nine stages of evolution before arriving at the current AluExcel design has given us a leading global product
- Edging without bias concerning material, aluminium and steel, Kinley can recommend what is best for the customer
- Great products, with total flexibility and control of QUALITY, PRICES and LEAD times!
- Opportunities to continuously develop new and better

OUR MISSION INSPIRING OUTDOOR SPACES

Connecting our specialist knowledge with flexible, high quality products and solutions for inspired places.

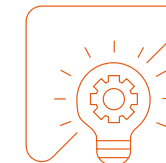

This is what drives our brand. It should be reflected in every brand-led communication and activity throughout the organisation.

OUR VALUES

QUALITY

Our products are manufactured in the UK, guaranteeing their quality and suitability for a range of commercial landscaping projects.

INNOVATION

Through pioneering product research and development, we continue to push the boundaries of what's possible in landscape edging design.

INTEGRITY

Our long-standing relationships with clients and industry partners are forged on our reputation as a trusted manufacturer of products that perform as intended.

PASSION

We are committed to providing customers with the products they need to create green spaces that enrich our environment.

We take pride in helping shape a greener, more sustainable future.

PEOPLE

Our staff and customers are central to our success. We listen carefully, respond thoughtfully, and always strive to create meaningful experiences for them. Their loyalty and contribution are invaluable to us.

INNOVATIONS

One of Kinley’s core values is innovation, and it is something we are always doing.

With our own in-house manufacturing, team of designers, and a dedicated product development team, we are always working on the next innovations that the commercial landscaping industry needs and asks for.

Some key focuses at the moment are on – rainwater harvesting and SuDs, the expansion of commercial outdoor furniture, audio, visual and lighting, and new surface options, such as live grass, artificial grass and woods.

We are always open to working closely with our market and thrive off of feedback.

HVM

(HOSTILE VEHICLE MITIGATION)

Jupiter Double Bollard

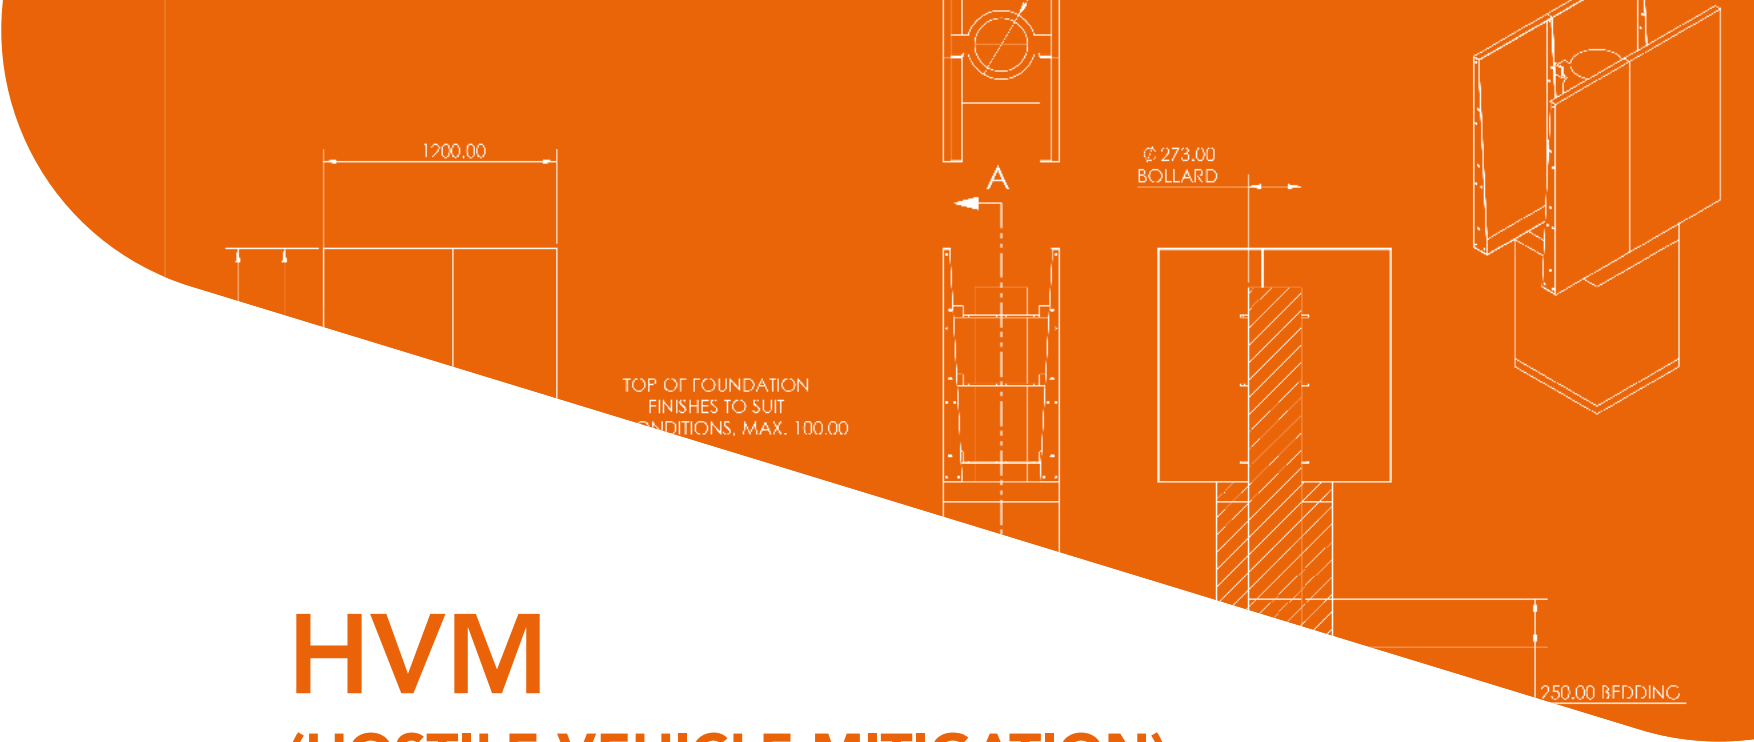

Jupiter Bollard with Collar

PAS-certified HVM planters are engineered to deliver the highest levels of security performance while seamlessly integrating into the surrounding landscape. Designed to meet stringent hostile vehicle mitigation requirements, they provide robust protection without compromising on aesthetics. Their fully integrated, modular design allows for flexible installation across long perimeter stretches or as standalone security features within individual spaces.

By transforming what has traditionally been a purely functional security product, these planters create attractive, welcoming environments that enhance the overall user experience. Combining security, landscaping, and place-making in one solution, they offer a practical yet visually appealing alternative to conventional barriers. Available in a range of sizes, finishes, and configurations, they can be tailored to suit the character and requirements of any project. The result is a multi-functional product that delivers safety, durability, and design excellence in equal measure.

OUR RESOURCES

We are all about added value, providing a number of services to help you throughout the duration of your project and beyond.

Here is an overview of the services that we offer.

CPDs

Book a CPD, project consultation or product and installation training session with one of our project consultants. Find out more about the CPDs we offer.

Technical help

We believe knowledge is king when it comes to ensuring customers get the very best from our products. It's why we've compiled a portfolio of guidance containing essential design, specification and installation information. These are your downloadable assets for creating landscape edging that is unique to your outdoor space and time.

Site Support

We don't just provide you with the product and move on. We offer site support and installation advice, helping to provide the reassurance and confidence where needed. We are a full-systems provider, ensuring all elements are covered and looked after.

Samples

We offer full-size system samples that can be set-up in your office, for a client visit, or for a standard product demonstration, with samples across the entire range of our products.

Design Services

With an in-house design team, we offer full design services from concept to completion, being able to provide support and guidance throughout the entire scheme and even into installation on site.

In-house Manufacturing

With manufacturing all being controlled and processed through our own factory, it allows us to control each and every process to the highest of quality and level, focusing on the small bits that get overlooked through generic manufactures. It also ensures that our quality is superior to all of our competitors, as we have eyes on every piece of material and finished component as it comes into and leaves the factory.
