

How to Order Oska in the VA

The Oska Pulse is categorized as a durable medical equipment (DME), so it is ordered for Patient home care in the same way a Provider would order a cane, brace, walker, etc. through the prosthetics department.

HOW TO ORDER:

- 1.) Open your computer system terminal, click "Consult", then "Prosthetics". Scroll down and choose "Generic Consult".
- 2.) In the box which opens, enter your order (Oska Pulse, Item #: MD4001). Include the Patient's diagnosis in your entry (such as pain, etc.).
- 3.) The appropriate HCPC code is E0761.
- 4.) In the note section, you will need to specify where Prosthetics should send the PO (Jett Medical).
- 5.) When you click Enter, the order will be forwarded to the Prosthetics Department.
- 6.) Once the PO is received, the Patient will be called and educated on the device. The Oska will be shipped directly to the Patient's home.

VERBIAGE FOR OSKA JUSTIFICATION:

I am prescribing a wearable Pulsed Electro-Magnetic Field (PEMF) Therapy device, called the "Oska Pulse" from Jett Medical due to my Patient's needs and diagnosis. The Oska Pulse is being prescribed as part of the Patient's pain treatment plan. It is my expectation that use of this device will accelerate recovery and decrease the use of narcotic opiates. The veteran has trialed various modalities including medication, therapy and/or PT with moderate but not lasting benefit. Patient education was completed for the Oska in clinic.
