AUTOPILOT NOT COPILOT

Your catalog grows itself.

Enriched automatically, pushed live to your ERP and website.

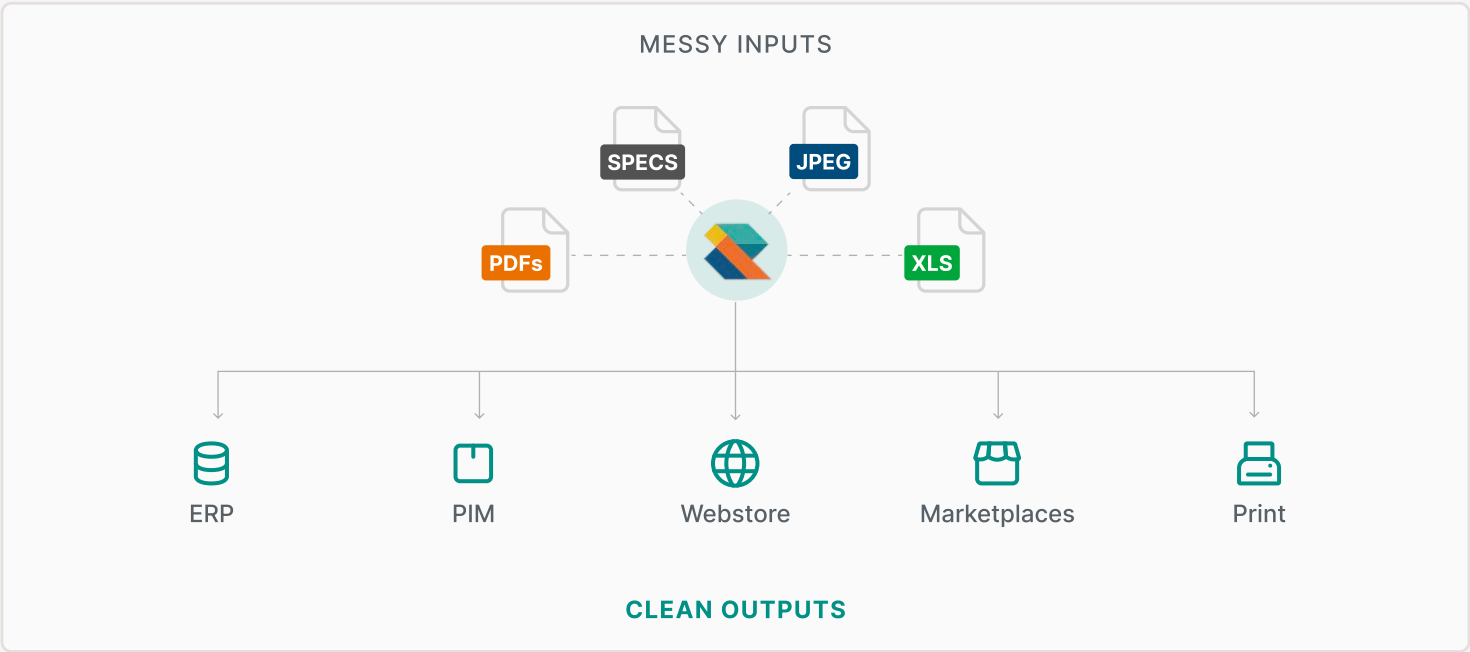

AICPA SOC SOC 2 Type 2

The problem

1 in 4

product attributes in a typical distributor catalog are missing

Supplier data arrives in every format but yours. Incomplete records cost B2B sellers an estimated 23% in revenue.

How it works

01 Ingest

Pulls together supplier catalogs, spec sheets, PDFs, images, and spreadsheets

02 Normalize

Maps every source to your taxonomy and your units of measure, not the supplier's.

03 Enrich

Fills missing attributes, writes usable descriptions, attaches images, and classifies each product with a confidence score.

04 Publish

Pushes complete records live to your ERP, PIM, webstore, marketplaces, and print catalog.

RUNS ON THE ERP YOU HAVE ALREADY

infor · EPICOR · NETSUITE · SAP · sage · Acumatica The Cloud ERP · Microsoft Dynamics 365

+ every other major distribution ERP

What you get

Every attribute, filled.

Descriptions, specs, units of measure, and categorization come out complete.

One format, every channel.

Normalized against your taxonomy, not each supplier's, so the same record works everywhere downstream.

The layer everything else runs on.

Bid matches a complete catalog. Sales Order reads a part-free order. Purchasing finds a substitute. AP clears a line that matches.

Single-tenant.

Trained on your data alone, not the industry's. Your catalog stays yours.
