AUTOPILOT NOT COPILOT

We hunt. We quote. We submit. On autopilot.

Portals searched. Bids won.

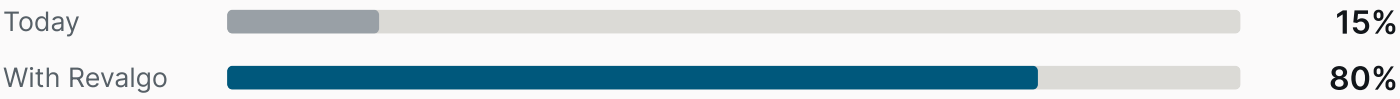

The problem

15%

of qualified bid opportunities get a response today

Opportunities live across hundreds of portals and bid sites. No team can watch them all, so most go unanswered.

QUALIFIED OPPORTUNITIES PURSUED

What you get

Bids you can win, not noise.

Filtered by category, geography, deal size, and catalog fit, then scored on your odds.

Reads the whole package.

Clean tables, scanned pages, ambiguous specs, 100+ page solicitations. Everything comes out structured, with a confidence score on each line.

Backfills the whole spreadsheet.

Substitutes from your catalog when you do not stock it, live supplier pricing when you do not carry it.

Single-tenant.

Trained on your data alone, not the industry's. Your bid history stays yours.

RUNS ON THE ERP YOU HAVE ALREADY

infor · EPICOR · NETSUITE · SAP · sage · Acumatica The Cloud ERP · Microsoft Dynamics 365

+ every other major distribution ERP

How it works

01 Discover

Monitors procurement portals, RFP boards, and government bid sites in your categories.

02 Qualify

Filters against your criteria so you see the bids you can actually win.

03 Extract

Parses long PDFs and attachments into structured line items.

04 Build

Maps demand to your catalog and produces the quote inside your ERP. Bids flow through as quotes, not as documents somebody has to re-key.

What it's worth

5-10x
more bids pursued, same team

35 hrs
of manual review on a 134-line bid, now processed in hours

90%
less administrative data entry
