

Cryo-Large

Product Sheet

Species: *Semibalanus balanoides*

Size: Length 320µm/Width 150µm

CryoPlankton provides a ready-to-use alternative to live feed cultures, delivering high-quality natural marine plankton. Cryo-L is designed for larvae adapted to large prey, or as a smooth transition from Cryo-S. It supports larvae through to weaning while simplifying hatchery operations and improving fry quality and survival.

Nutritional Content

Nutritional Content	
Average content in g/100g dry weight	
Protein	46
Lipid	8
Ash	29
Fatty acid content (% of total fatty acids)	
DHA	20
EPA	27
Total saturated fatty acids	21
Total monosaturated fatty acids	24
Total polyunsaturated fatty acids	55
Total omega-3 fatty acids	50

Nauplii dry weight is roughly 25%.

Packaging

Cryo-L is frozen in 12 g pellets, stored in an easy-to-ship cryogenic dewar. Each dewar contains 80 kg of CryoPlankton, approx. 4 bill. nauplii. Cryo-L contains a mixture of nauplii (50%) (approx. 100 mill nauplii per kg) and a cryoprotectant agent (CPA) production aid (50%); consisting of seawater (30%), ethylene glycol (20%), salt (0,9%).

Shelf-life and Storage

CryoPlankton is stored in liquid nitrogen at -196°C and have unlimited storage time. Liquid nitrogen will evaporate through time and the dewar must be refilled on a regular basis.

Lot number

Each dewar is marked with a lot number, securing traceability of harvesting location, date of harvest and detailed information about the preservation procedure.

Preparing the feed

STEP 1 - THAWING

- Temperature: 10-20°C
- Salinity: 25-35 ppt
- Volume: 25 L of seawater per kg of product
- Duration: 5 minutes
- Continuous stirring

STEP 2 - RINSING

- Temperature: 10-20°C
- Salinity: 25-35 ppt
- Filter net: 90 µm for Cryo-L
- Volume: 40 L of seawater per kg of product
- Rinsing time: 10-20 minutes

STEP 3 - REVITALIZE

- Temperature: <5°C
- Salinity: 25-35 ppt
- Volume: Min. 50 L of seawater per kg of product
- Time: 2-3 hours
- Max. storage: 36 hours
- Continuous aeration with open hose

STEP 4 - FEED

- Ready to feed to your larvae with dosing pumps or hand feeding

Safe handling

Safety

- Personal protective equipment: Wear protective gloves and safety glasses when handling the cryopreserved product.
- Skin and eye contact: Direct contact may cause irritation. In case of contact, rinse the affected area with water for at least 15 minutes.
- Ingestion: The cryoprotectant is toxic if swallowed. Do not ingest.
- Dilution: The product is diluted during use, significantly reducing the risk of irritation.
- Disposal: The cryoprotectant degrades rapidly and may be disposed of via the drain.

Liquid nitrogen (UN1977)

The dewar contains liquid nitrogen (LN₂) as a refrigerated storage medium and may cause severe cryogenic burns or injury in case of contact. Wear cold-insulating gloves and a face shield or suitable eye protection when handling the dewar. Nitrogen gas can displace oxygen and may lead to oxygen depletion and suffocation. Use and store the dewar in a well-ventilated area or outdoors.
