COMPARE HACKUITY

Hackuity vs. Qualys

See how Hackuity compares with Qualys for vulnerability prioritization, remediation orchestration, deployment flexibility, and vendor-neutral operations.

Which platform is the better fit?

A pragmatic, buyer-oriented view to help map software capabilities to actual team requirements.

CHOOSE QUALYS IF

Single-vendor breadth

Qualys may fit if you want your vulnerability program centered around one large security vendor.

- You want native Qualys scanning
- Most of your security stack already runs on Qualys
- You prefer one broad platform covering many security functions
- You don't mind working primarily within one vendor ecosystem

VS

CHOOSE HACKUITY IF

Vendor-neutral operations

Hackuity is built for teams that need to make vulnerability management work across their entire environment.

- **You need transparent, auditable risk prioritization your team can validate and tune**
- **You want a platform built exclusively for Vulnerability Operations maturity**
- **You want to consolidate findings from any scanner, cloud tool, or ITSM without vendor lock-in**
- **You need a full VOC operating model, from triage to SLA enforcement to verified closure**
- **You operate in Europe with GDPR, NIS2, or data sovereignty requirements**

COMPARISON TABLE

Capability comparison

Capability	Qualys	Hackuity
Vendor neutrality	Limited Qualys-centered ecosystem	Strong fit Vendor-neutral by design
Existing scanner investments	Partial fit Best within Qualys ecosystem	Strong fit Bring Qualys, Tenable, Rapid7 and others
Risk scoring	Partial fit Proprietary TruRisk	Strong fit Transparent, auditable TRS
Third-party aggregation	Partial fit Added through ETM	Strong fit Built into the core platform
Remediation operations	Limited Part of a broad platform	Strong fit Core product focus
European data sovereignty	Limited US-based global platform	Strong fit SaaS, on-prem: EU-compliant deployment
Platform approach	Partial fit Broad security suite	Strong fit Purpose-built Vulnerability Operations
Native scanning	Strong fit Built in	Strong fit Uses your existing scanners
Analyst Recognition	Strong fit Gartner Challenger EAP MQ 2025 · IDC Major Player 2025	Strong fit Forrester UVM Landscape Q1 2025 · Proactive Security Landscape Q1 2026
VM focus	Partial fit One part of a broad portfolio	Strong fit Dedicated to vulnerability operations
Integration ecosystem	Limited Limited third-party connector catalog	Strong fit 130+ security integrations
Integration depth	Limited Limited outside the Qualys ecosystem	Strong fit Deep integrations built for vulnerability operations

DIFFERENCIATORS

Where Hackuity stands apart.

01 Built for your whole security stack

Connect findings from 130+ security tools, including Qualys, Tenable, Rapid7 and CrowdStrike. Hackuity normalizes everything into one place, without favoring one scanner or ecosystem.

02 Know exactly why something is critical

Every True Risk Score is explainable. See the threat signals, asset context and business weight behind it. Your team can understand, defend and tune every priority.

03 Turn priorities into remediation

Finding vulnerabilities isn't the hard part. Fixing them is. Hackuity routes vulnerabilities to the right owners, syncs with ITSM tools, tracks SLAs and proves remediation.

04 Your data. Your deployment.

Choose EU SaaS, hybrid or fully on-premise. Keep vulnerability data where you need it, with deployment options built for European security and regulatory requirements.

05 Deep integrations, not just connectors

Hackuity doesn't just ingest findings. It connects vulnerability data with assets, threat intelligence and remediation workflows, so teams can act from one place.

130+ INTEGRATIONS

Keep your scanners. Add the operating layer.

Hackuity is designed to work with your existing scanners, cloud tools, asset inventories, threat intelligence feeds, and ITSM workflows. Instead of replacing your stack, Hackuity connects it, normalizes it, and turns fragmented findings into operational action.

SCENARIOS

When teams choose Hackuity

SCENARIO 01

From Nucleus-centric VM to vendor-neutral CTEM

Nucleus is a capable vulnerability management platform. But if your stack includes tools beyond what Nucleus natively integrates, coverage gaps appear. Hackuity normalizes findings from every tool, 130+ connectors, no scanner bias, into one exposure view, and adds the CTEM operating model Nucleus does not provide.

Explore CTEM →

SCENARIO 02

Building a Vulnerability Operations Center on top of Nucleus

Nucleus tells you what's vulnerable and surfaces risk priorities. It doesn't route ownership, enforce SLAs, or prove remediation progress to your board. Hackuity turns findings into a structured operational program, from triage to closure to reporting.

Explore VOC Coming soon

SCENARIO 03

Delivering managed vulnerability services at scale

Nucleus targets MSSPs but is not purpose-built for multi-tenant service delivery. Hackuity is designed for it from day one: isolated client environments, per-client reporting, and a scalable VOC model that grows with your practice without adding operational overhead.

FAQ

Questions buyers ask when comparing platforms

Can Hackuity replace Qualys?

Hackuity isn't a vulnerability scanner. It works with scanners like Qualys, Tenable, and Rapid7. If you already use Qualys for scanning, you can keep it and use Hackuity as the operating layer for aggregation, prioritization, and remediation.

Why use Hackuity if we already have Qualys?

You don't need to replace Qualys. Hackuity connects Qualys findings with data from your other scanners and security tools. It normalizes and deduplicates everything, then gives your team one place to prioritize risk and drive remediation.

How is Hackuity different from Qualys for integrations?

Qualys is built primarily around its own security ecosystem. Hackuity is vendor-neutral by design, connecting with 100+ security tools across scanners, cloud security, threat intelligence, asset management, and ITSM. This lets you build vulnerability operations around your existing stack, instead of one vendor.

Ready to compare Hackuity with your current setup?

See how Hackuity fits your security program, prioritizes cyber risk, and supports your remediation workflows.
