

Longevity / anti-aging (formulation only)

CORE TAKEAWAY

Solid-state and formulation process only. Explicit exclusion of cell therapy and regenerative claims for this iteration.

FRANKLIN 1 FIT

- Longevity work on Franklin 1 is formulation and solid-state process data — not anti-aging in space.
- Sealed dual-reservoir crystallization / mixing / thermal windows with optical records.
- Regenerative medicine and continuous culture are future-iteration topics and are not offered on Franklin 1.
- Pathfinder targeted 2027, partner- and funding-gated.
- No cell-therapy or organoid claims.

Franklin 1 is a data-first microgravity process payload. It complements return platforms and ISS slots; it does not replace them. Atom One Space does not claim to treat or cure any disease in orbit.
