THE AUTO DECODER

Upgrade Priority Planner

List every upgrade under consideration, score each one honestly, and let the math decide the order — before any money is spent.

How to score:

1. **List** every upgrade being considered — big and small — in the table below.
2. **Estimate the total cost** for each: part + shipping + install labor + any supporting mods it requires.
3. **Rate the expected benefit 1–10** (10 = transforms the vehicle; 1 = barely noticeable). Be honest — "looks cool" counts, but score it as looks.
4. **Compute the ROI score:** benefit rating × 10 ÷ cost in hundreds. Example: benefit 8 on a $400 upgrade → 8 × 10 ÷ 4 = **20**.
5. **Rank by ROI score**, highest first. Fund from the top down.

UPGRADE	EST. TOTAL COST	EXPECTED BENEFIT	ROI SCORE	PRIORITY RANK
