# 2025 Global eInvoicing Report

**A Compliance Guide for Finance Leaders of Multinational Enterprises**

billtrust

# Finance leaders operate at the intersection of strategy, risk, and value creation.

Today, however, their efforts are often hindered by a perfect storm of internal and external pressures: outdated and rigid legacy systems that increase costs; persistent process inefficiencies that hamper productivity; and an accelerating wave of global electronic invoicing (eInvoicing) mandates that introduce significant compliance risk. This report provides a strategic guide for turning these combined challenges into a powerful catalyst for modernization and long-term value creation.

## Your Partner for Staying Ahead

As a company delivering outbound invoices to over 150 nations worldwide, Billtrust stays on the forefront of global invoicing trends. We witness these continuous changes, and our goal is to educate financial leaders on evolving requirements. In addition to this report, we publish quarterly compliance updates. Plus, we maintain an interactive global compliance map, where you can stay informed of changing mandates across the globe.

This report is intended for informational purposes only. Regulations are always evolving. The validation of the current status for each country is recommended to ensure readers are aware of the latest updates. Information provided herein does not, and is not intended to, constitute legal or other professional advice.

eInvoicing mandates are not merely an IT upgrade or a back-office process change. They're a worldwide movement as more countries enact new rules requiring digital invoices and real-time tax reports. Regulatory adoption is accelerating globally, representing a **fundamental change in how international business is conducted.** For any company operating across borders, eInvoicing regulations present a significant compliance risk but also a powerful opportunity to spur digital transformation:

### More to Manage. More to Risk.

Companies are increasingly overwhelmed by a growing volume of invoices. Globally, an estimated 560 billion invoices were exchanged in 2024, a figure projected to increase by a further 46% over the next three years.

### The Global Compliance Puzzle

As every new country joins the eInvoicing movement, the scope of risk widens. Meanwhile, each country has its own rules and deadlines. Simply keeping up can be daunting – much less orchestrating global compliance. Stiff fines are imposed for every invoice that is non-compliant. In some jurisdictions — penalties can revoke your ability to trade.

### Turning Risk into Reward

Forward-leaning finance leaders are using this moment to make strategic changes in their accounts receivable operations. Rather than viewing eInvoicing mandates as a compliance burden, they see them as a catalyst for modernization and long-term value creation.

billtrust

For businesses, the critical question is no longer *if* they should adopt eInvoicing, but rather *how* and *how expeditiously* they must adapt.

## What's inside

This report is designed for finance leaders needing a clear view of the global eInvoicing mandates in 2025 and beyond. It outlines the regulatory forces driving companies to adopt eInvoicing practices, a strategic plan for compliance from Deloitte, and a breakdown of the risk versus reward of invoice digital transformation.

# 3 Quick Takeaways for Finance Leaders

## Mandate or No Mandate — eInvoicing is the New Standard.

Digital invoices have proliferated everyday business practices, and regulatory adoption has reached critical mass globally. As a result, eInvoicing is no longer avoidable. Diverse national and regional regulations have reached every continent. It's only a matter of time before every nation introduces new legislation or joins existing regulatory models. Learn why Europe and Latin America are leading the world in compliance strategy. **See how global standards could soon arise, and why North America is the new trend to watch.**

**Let's go — Jump to Page 6**

## The Perfect Storm is Here. Don't Wait for Imminent Deadlines.

Recent momentum has created a perfect storm where several major mandates and their statutory timelines will simultaneously converge between 2025 and 2030. Waiting until deadlines are imminent will lead to rushed implementations, inflated costs, and a higher risk of non-compliance. **Explore the three forces triggering urgent change and the two control techniques behind most regulations.**

**Show me — Jump to Page 5**

## When the Global Goal Post is Always Moving, Local Solutions Won't Cut It.

Compliance challenges are rooted in variations in technical standards, models, and timelines across the globe. With requirements expanding rapidly, finance leaders must move away from a patchwork of local solutions and beware of the compliance risks within their legacy ERP systems. Embracing a global compliance strategy that doesn't ignore artificial intelligence is the key to success. **Deloitte's Senior Tax Technology Consultant offers a structured approach for success.**

**Get the details on Page 12**

# The Perfect Storm of eInvoicing Mandates

The period between 2025 and 2030 will be a critical turning point. IDC reports that more than 60% of finance leaders agree that eInvoicing will have a significant impact on their tax management over the next 24 months. Landmark initiatives in the United States and the European Union are set to accelerate the transition to eInvoicing over the next five years, signaling a major disruption for public and private sector transactions.

**Here's a quick glance at the three forces converging into a perfect storm for finance leaders:**

billtrust

## Force 1: Europe's ViDA Standardization Deadline is Now Looming

VAT in the Digital Age (ViDA) establishes an EU-wide Digital Reporting Requirement for all cross-border B2B transactions by July 1, 2030. It mandates the use of a specific eInvoice format and necessitates real-time reporting. Moreover, it accelerates country-level adoption by allowing Member States to implement domestic B2B eInvoicing requirements without prior EU approval.

## Force 2: Real-Time Tax Control Regimes Will Soon Blanket the Globe

By 2030, most of the globe will be blanketed in real-time tax control regimes known as Continuous Transaction Controls (CTCs). These near-real-time checks on business transactions ensure tax compliance at the point of transaction. The demonstrated success in Latin American and a number of European countries is encouraging other nations to follow suit. More countries across Asia-Pacific, Africa and the Middle East are expected to introduce or expand CTC requirements.

## Force 3: North America Has Already Made Its First Move

In March 2025, a U.S. Executive Order mandated a full transition to digital payments for all Federal transactions. While focused on Business-to-Government (B2G) electronic payments, this move is a significant first step for North America – which has been considered the global laggard in eInvoicing. Governments historically established B2G digital frameworks before expanding to B2B. This initial step lays the groundwork for more changes ahead. The U.S. is considered a major regulatory trend to watch over the coming years.

**Let's take a closer look at why these forces are triggering urgent change.**

# Looming Deadlines: EU Leads in Global Standards

The year 2025 and 2026 will be transformational years in Europe for eInvoicing as new regulation launches and implementation deadlines are phased in over the next 5 years. The European Union's **VAT in the Digital Age (ViDA)** has officially become law and is considered the most significant driver of eInvoicing reform in Europe, covering major European economies such as Germany, France, Poland, and Belgium to name just a few.

Why is it important? A primary goal of this new system is to consolidate the EU's fragmented, country-by-country reporting rules into a single standard, thereby easing the compliance burden for multinational businesses. This uniformity signals maturity in its ability to level a vast number of regulatory inconsistencies across *27 countries!*

> **In leveling inconsistencies across 27 countries, ViDA is showing the world how global standardization might come to life.**

For these reasons, ViDA is viewed as one of the most ambitious, large-scale digital tax initiatives in the world. Its creation of an interoperable framework across all member states is seen by many in the tax and technology sectors as a potential model or building block for broader global agreements in the future.

billtrust

## What ViDA Means for Finance Leaders

Starting July 1, 2030, eInvoicing will be mandatory for all B2B suppliers subject to cross-border reporting obligations. To be prepared, finance leaders should consider evaluating their invoice data management and usage, as well as the responsiveness of their accounts receivable operation. ViDA demands that invoices be issued within 10 days of the supply of goods and services.

Here's a guide for accounts receivable digital transformation.

# The 2 Control Techniques Behind Global eInvoicing Requirements

To understand the significance of the EU's ViDA initiative, it's essential to look at the two primary eInvoicing regulatory CTC models used worldwide.

billtrust

## 1. Centralized Clearance

In this model, the government acts as a direct intermediary. All invoices must be sent to, validated by, and cleared through a government platform before they are considered legally valid and can be forwarded to the recipient. This grants tax authorities maximum real-time oversight.

The clearance model is centralized in most countries, where a single government entity manages the platform (e.g., Italy). But in some countries, it may be decentralized, where the validation function is delegated to certified third-party providers, as seen in Mexico.

**EXAMPLES**

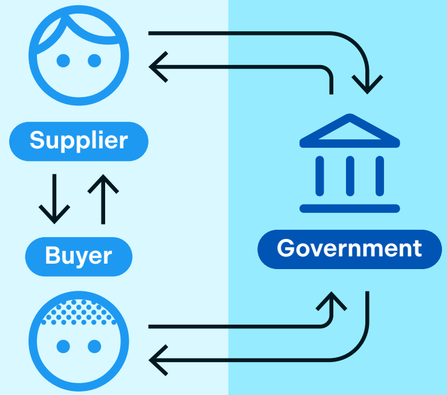

Italy (SdI), Poland (KSeF), and most of Latin America

**PROS**

Guarantees tax compliance instantly as the government has full, real-time data

**CONS**

Creates a single point of failure — process bottlenecks can bring trade to a complete stop

## 2. Decentralized CTC

This model does not force transactions through a single government system. Instead, it leverages open standards and networks (most notably Peppol). In this model, taxpayers interact with a competitive network of accredited private-sector service providers, also called access points.

The certified service providers are responsible for sending the required tax data to the government platform in real-time as the invoice is exchanged between the trading partners. The tax authority's role is that of a real-time data recipient and regulator of the certified service providers, rather than a direct transaction intermediary.

**EXAMPLES**

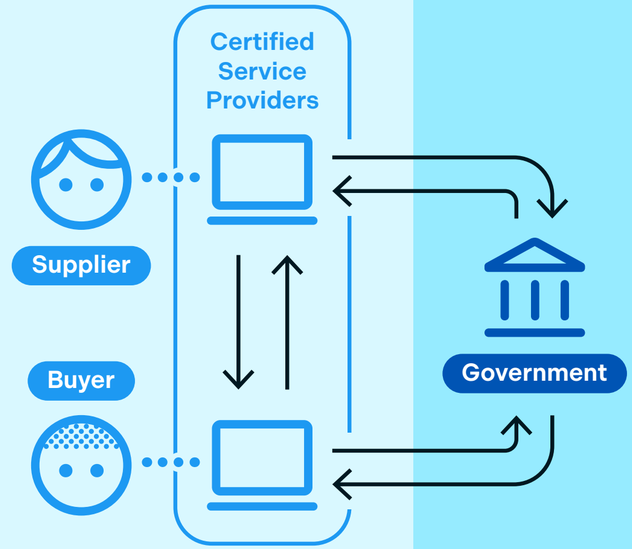

Germany, Belgium, Australia, and the United Arab Emirates.

**PROS**

Consistency in invoice formatting enables high levels of automation and avoids a central government bottleneck

**CONS**

Businesses rely on access points or service providers for successful transmission

## ViDA Misconceptions

Contrary to some interpretations, ViDA does *not* create a single, EU-wide centralized clearance platform. Instead, for cross-border B2B transactions, ViDA firmly establishes a *Decentralized Interoperability Model* by mandating two key elements:

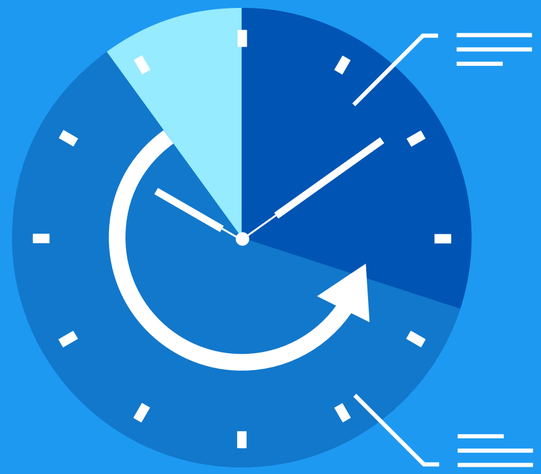

- **A Harmonized eInvoice Standard:** All intra-EU invoices must conform to the European Standard (EN 16931).
- **A Digital Reporting Requirement (DRR):** Businesses must report data from these standardized invoices to their local, national tax authority in near real-time.

Countries with advanced centralized systems, like Italy and Poland, must now adapt their platforms to support this decentralized, EN 16931-based model for all their cross-border trade.

## What CTCs mean for Finance Leaders

Standardized formats for electronic invoices are rising in importance. Organizations need flexible yet granular control over invoice formatting to comply – not to mention the ability to maintain and update multiple formats for each country's unique requirements. Back-end systems must also be able to facilitate the routing of invoices through multiple Clearance houses or service providers. This explains why many turn to solutions for eInvoicing compliance. A single partner can handle routing and compliance for you.

This journey toward the 2030 deadline is dynamic. To stay ahead of the continuous updates and requirement changes made by individual countries for ViDA and other global mandates, explore our quarterly eInvoicing updates.

## WARNING! Don't Be Fooled by Postponed Deadlines

France, Poland, and Spain have postponed their compliance deadlines. But these are not signs that the eInvoicing trend is reversing. Instead, they're a mark of business-friendly practices. Acknowledging the need for more flexibility, governments are softening their hard deadlines and cutover approaches. Examples include staggered rollouts based on company size or revenue (as seen in Malaysia, Germany, and Spain) and grace periods with deferred penalties, such as Malaysia's "relaxation period." Despite these adjustments, the overall goal and direction of the mandates remain unchanged.

# Around the World: CTCs Spawn Real-Time Tax Control Regimes

Global tax compliance is undergoing an irreversible transformation from the traditional **Post-Audit Model** to a paradigm of **Continuous Transaction Controls (CTCs),** where governments demand real-time or near-real-time electronic validation of business transactions.

For years, compliance audits have been based on historical lookbacks, occurring months or even years after the transactions have taken place. While these Post-Audit Models offer businesses maximum flexibility in terms of format and exchange method, it is increasingly viewed by governments as ineffective in combating VAT fraud. It remains the status quo in jurisdictions without specific eInvoicing mandates but is rapidly being superseded by CTC models globally.

Numerous countries have announced that they are moving towards CTC models. These models involve governmental tax authorities actively accessing invoice data in (near) real-time, without disrupting the billing process between suppliers and buyers.

billtrust

## The Profound Impact of CTCs

CTCs give governments unprecedented, real-time visibility into economic transactions, fundamentally changing the nature of tax enforcement from a historical review to a live process.

## Why are CTCs the New Normal?

The underlying driver of CTCs is the need to close Value-Added Tax (VAT) gaps — the difference between expected VAT revenue and the amount actually collected by a government. eInvoicing is seen as a powerful tool that could cut this gap by as much as 50%.

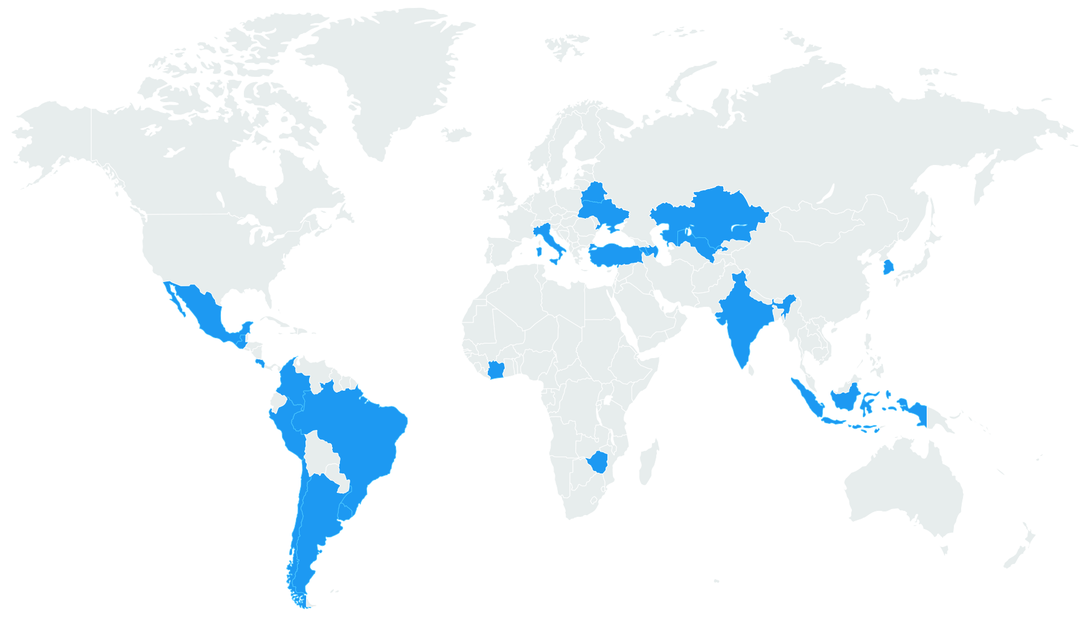

# 2020 vs. 2030: CTCs Will Soon Blanket the Globe

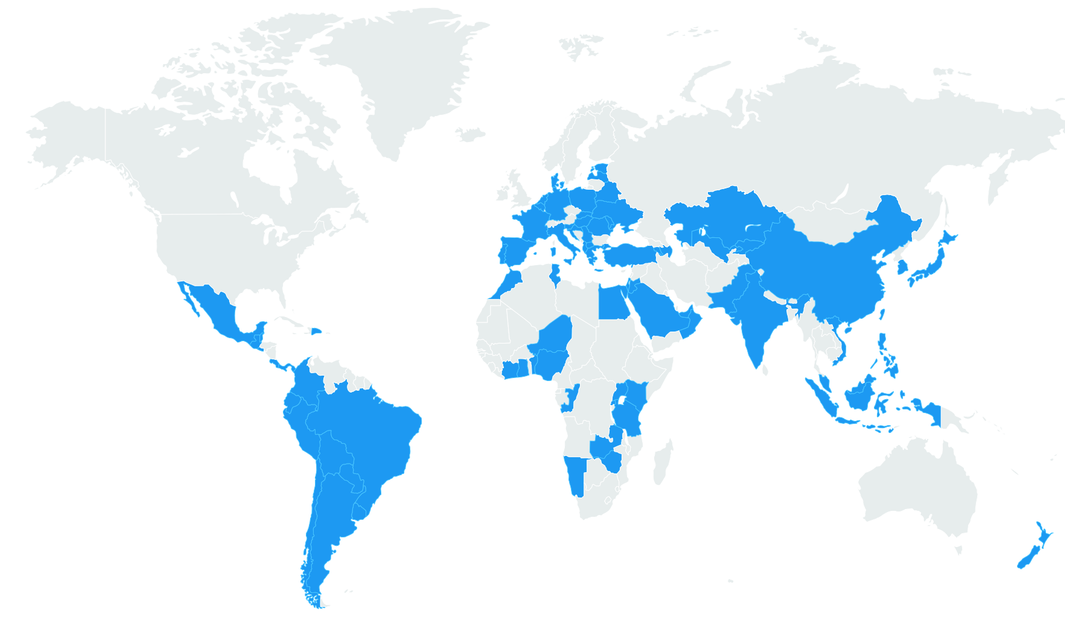

Real-time tax control regimes are rapidly becoming the global standard. While Europe and Latin America are at the forefront of adoption, rapid uptake has been observed in Asia, and North America is now showing a growing interest. Regulations are evolving constantly.

**Stay informed of eInvoicing compliance changes with our interactive compliance map.**

## 2020

## 2030

CTC in effect

# 3 Types of CTC Models

**The Clearance Model** is the most stringent form of CTC and represents a radical departure from post-audit principles. This approach demands that B2B invoices be created in specific electronic formats and cleared through government software platforms before they can even be sent to a buyer. Clearance Models involve governmental tax authorities actively accessing invoice data in (near) real-time, without disrupting the billing process between suppliers and buyers.

**The Real-Time Reporting Model** only emphasizes the need for real-time reporting capabilities. In this distinct form of CTC, companies are legally obligated to report invoice data to the tax authority's platform in real-time or near-real-time (within 24 hours). In this model businesses are free to exchange invoices directly with each other in any agreed-upon format.

A more recent evolution in eInvoicing architecture is the **Decentralized CTC and Exchange (DCTCE) Model.** This approach seeks to achieve the data-rich benefits of CTCs while avoiding the creation of a single, central government platform that could become a bottleneck.

## What CTCs Mean for Finance Leaders

Real-time financial data access and management are paramount for compliance. Additionally, finance leaders should ensure their eInvoicing solutions empower unified management across the order-to-cash lifecycle. Not all ERP systems are built for compliance. Learn more about ERP compliance gaps and how to solve them.

# The Bottom Line

The simultaneous convergence of multiple mandates creates a significant pressure point, requiring more than country-specific solutions. New eInvoicing regulations are cited as the top reasons CFOs are making investments in technology like accounts receivable automation software. But consider strategy – not just a solution. Before you make a purchase, reconsider your approach, building a holistic plan for financial transformation.

# Strategic Planning: Advice From Deloitte

**Deloitte.**

The following was provided by Deloitte, which shares proven perspectives and best practices to both empower local businesses to surmount obstacles and establish efficient eInvoicing solutions with precision.

Strategic planning is essential for organizations to navigate the evolving landscape of eInvoicing and eReporting. These obligations differ across regions and timelines, making it vital to anticipate future developments. Effective planning impacts business processes, stakeholders, tax compliance, and regulatory adherence.

billtrust

"In a rapidly digitalizing world, strategic planning is the foundation of sustained competitiveness and resilience.

"Poor planning can lead to regulatory compliance issues, cash flow problems, operational disruptions, and reputational damage. Having a proactive and forward-thinking approach ensures that your organization is not only compliant but also agile and lean, reaping the benefits of eInvoicing to further automate processes and utilize it as a catalyst for transformation of finance and tax processes."

**Hanne Van De Weyer**
**Senior Manager Tax Technology Consulting, Deloitte**

# A Structured Approach to eInvoicing Compliance

Developing a strategic plan in the face of continuous digitization, whether domestic or global, demands a structured methodology:

- Map out your impacted processes and systems in light of eInvoicing
- Review source data to verify correctness and validity
- Understand the impact on your business, ERP, tax, and financial processes
- Establish new workflows to adapt to the new landscape
- Maintain strong process governance (often overlooked)
- Gain valuable insights by leveraging the experiences and lessons from more mature markets that have undergone eInvoicing transformations

The mapping of these impacted processes allows leaders to identify where automation opportunities exist, further enhancing efficiency and accuracy. This approach ensures that financial professionals understand the changes in their roles and processes due to eInvoicing, fostering a smooth transition, effective adaptation, and ultimately driving operational excellence.

billtrust

## The Billtrust-Deloitte Collaboration

Billtrust's collaboration with Deloitte offers invaluable insights into eInvoicing strategies. Drawing on Deloitte's wealth of experience working with diverse global and local companies, organizations gain access to tailored approaches and industry best practices for successful eInvoicing implementation.

Deloitte's extensive background in assisting a variety of global and local companies positions them as adept supporters of local businesses. With insights and best practices acquired from their work with global corporations, they can guide local entities through the challenges of eInvoicing, customizing the approach to their unique requirements.

# Expediting Implementation: Strategies Have Changed

eInvoicing is not a new concept for global firms; it has been in use for years, particularly in regions like LATAM and with Italy leading the way in Europe. Initially, companies introduced eInvoicing mandates country by country, but there is now a fluctuation in that approach. The rapid introduction of new mandates highlights the need for a more global or regional strategy to expedite implementation. This broader approach enables IT to create a centralized framework that benefits local markets by streamlining the implementation of global processes and customizing them to meet specific requirements. This allows finance organizations to create best practice methodologies that can be replicated in other regions where eInvoicing is introduced, thus accelerating local market implementations.

> The rapid introduction of new eInvoicing mandates highlights the need for a global strategy to expedite implementation.

# Data Security and Privacy Are Paramount

Data security and privacy are critical in eInvoicing due to the sensitive financial information involved. This issue is further complicated by the presence of numerous stakeholders and systems operating in varied geographic and regulatory environments.

> Ensure that every external platform meets strict security and privacy requirements to stay compliant, prevent breaches, and maintain customer trust.

Organizations must guarantee the robustness and security of external portals used for distributing invoices, be it through a provider platform or a governmental portal. The protection of sensitive data throughout the invoicing process is paramount. Ensuring the integrity and confidentiality of data as it passes through these external systems is essential to prevent breaches and maintain trust. It is absolutely critical for organizations to validate that these portals provide a secure environment to protect data against unauthorized access and cyber threats.

## Getting Ahead of the Curve: Start Now Even if Mandates Don't Yet Apply

Equipping your organization with the expertise to remain at the forefront in the ever-changing world of eInvoicing is also crucial. It's imperative to do so proactively and ahead of time. The key takeaway is to start as soon as possible, even if your country has not yet mandated eInvoicing.

> "By beginning preparations now, you can ensure readiness, efficiency, and effective change management when eInvoicing becomes mandatory."
>
> **Hanne Van De Weyer, Senior Manager Tax Technology Consulting, Deloitte**

Early preparation allows you to map out impacts, review data, develop a robust methodology, and address potential challenges in advance. This proactive approach ensures smoother implementation across multiple countries and provides your organization with a head start. eInvoicing is already mandatory in many countries, and requirements are expanding quickly. Delaying preparations puts your organization at risk of falling behind competitors and facing compliance challenges. Acting now ensures you're not scrambling to catch up, but instead ready, efficient, and able to manage change effectively as new mandates take effect.

## eReporting Requires a Cohesive Data Strategy

Another important aspect, in addition to readiness, is the broader implications these changes bring for companies. The numerous reporting requirements running in parallel—such as traditional VAT compliance, eInvoicing, eReporting, Standard Audit File for Tax (SAF-T), and the emerging environmental, social and government (ESG) reporting—highlight the need for a cohesive data strategy.

> "We see that this is a new focus area not only for our clients but also for tax authorities. Ensuring that all these areas are aligned is crucial to maintaining control over your data and addressing the challenges posed by authorities during reconciliations and cross-checks."
>
> **Hanne Van De Weyer, Senior Manager Tax Technology Consulting, Deloitte**

# eInvoicing: A Cost or Money-Saving Opportunity?

As Deloitte explains, a global approach (rather than a local solution) expedites implementation, and a cohesive strategy founded in unified data management should be central for every invoicing program. However, global approaches and cohesive strategies can lead to total financial overhauls.

A modern, global eInvoicing solution can be the door opener for reducing paper, embracing automation, and gaining real-time visibility into global invoices. Solutions can position companies to enter new markets quickly and adapt to future mandates with minimal disruption. It can also be an opportunity to connect and align key stakeholders, growing from a mere tax project to an innovation catalyst across supply chain, legal, operations and finance. Don't miss this buyer's guide for accounts receivable automation software.

billtrust

While some leaders may feel overwhelmed by these demands, others reframe the challenge as the ultimate business case for transforming accounts receivable operations. Viewing eInvoicing solely as a compliance cost can be a missed opportunity. While a technology investment is required, the potential benefits can far outweigh the risks of non-compliance. In fact, the cost of inaction can be significantly higher, as demonstrated on the following page.

# The Cost of Inaction vs. The ROI of AI-Powered Transformation

| Role | Cost of Inaction | ROI of Transformation |
|---|---|---|
| **CFO** | ✖ **Non-compliance** fines and failed audits<br>✖ **Disrupted** and unpredictable cash flow<br>✖ **High DSO** and capital tied up in aging receivables<br>✖ **Emergency** project costs<br>✖ **Inability** to comply inhibits global market expansion | ✔ **40% faster** payments<br>✔ **AI-driven** cash forecasting<br>✔ **More capital** for strategic investments<br>✔ **Optimized** AR processes and enterprise costs<br>✔ **Enabled** global commerce and more revenue channels |
| **Controller** | ✖ **Lack** of financial visibility creates inaccurate reports for leadership<br>✖ **Manual** processes resulting in operational gridlock<br>✖ **Slow** financial close times leading to more write-offs<br>✖ **Non-compliance** fines and mounting risk from evolving regulatory mandates | ✔ **One source** for all AR data, increasing accuracy<br>✔ **AI-automated** processes reduce manual exceptions<br>✔ **Accelerated** close timelines with real-time, auditable einvoice data<br>✔ **Proactive** compliance and less risk — 92% say AR automation mitigates compliance risks |
| **Financial Planner** | ✖ **Inaccurate** forecasting based on stale data<br>✖ **Lack** of insight into payment behaviors and future risk<br>✖ **Reactive** operations and missed targets | ✔ **AI-driven** predictions on payment timing and bad debt risk<br>✔ **Holistic** AR visibility for smarter, more reliable forecasting<br>✔ **Advanced** analytics driving a proactive approach |
| **AR Collector** | ✖ **Blocked** payments and higher dispute caseloads due to poor data management<br>✖ **Deteriorated** customer experiences due to payment reminder fatigue<br>✖ **Stressful** employee experiences due to email overload<br>✖ **Time wasted** chasing low-risk, low-value accounts | ✔ **Centralized** AR management enables quick resolutions for faster payments<br>✔ **Happier** customers with the right communications at the right time<br>✔ **Streamlined** email management with Agentic AI<br>✔ **Automated,** personalized outreach based on payment patterns and risk level |

# Why Billtrust for Global eInvoicing Compliance?

As global eInvoicing mandates evolve and invoice volumes increase, finance leaders face a decisive moment to seek a compliance partner that can remove these burdens. Billtrust makes global eInvoicing simple, because compliance starts at the point of invoice creation.

## Expand Globally. Stay Compliant Automatically.

Billtrust's invoicing safeguards deliver critical value by ensuring that every invoice adheres to the latest regional, legal, and tax regulations. With built-in flexibility, Billtrust can support industry-specific requirements and adjust to ever-changing standards across global markets. By automating the compliance process, you can save time, reduce manual workloads, and reduce risk.

**eInvoicing Delivery Status:** eInvoice delivery status is sent directly into the customer's ERP for instant visibility that minimizes inconsistent reporting

**AP Portal Delivery:** eInvoices can be delivered to 260+ AP portals, reducing time-intensive manual processes

**Buyer-Facing Portal:** The platform allows buyers to access all their invoices, make payments using multiple methods, and track transaction history

## A Unified Platform for Seamless AR Cycle Management

The unified platform automates the entire AR cycle, from invoice creation and delivery through payment processing to cash application and collections. Beyond ensuring alignment with global regulatory requirements, Billtrust helps companies accelerate cash flow and gain real-time visibility into every stage of the AR process. Learn more about our AI-powered platform for accounts receivable automation.

**"Where many providers and countries struggle to stay current with the many rules and regulations, we always feel we are on top of our invoicing processes through our Billtrust partnership."**

Matthew Samme, Partner/ Principal, EY Global Services

Read the case study

billtrust

## De-Risk Your AR Investment

The biggest challenge with financial innovation is integrating with the complex AR tech stack. Compatibility is one of Billtrust's top differentiators for a reason. Our platform is engineered for seamless integration with your existing ERP and client AP portals, and our onboarding specialists act as partners to ensure a smooth migration, mitigating common points of failure and purchase regret. Learn more about our implementation process, platform customization, and professional services.

## Beyond Compliance: Make Your Data AI-Ready

As leaders prioritize investments in AI to drive efficiency and smarter forecasting, they face a big roadblock: data quality and quantity. AI insight is only as good as the data that feeds the analytics engine. When done right, a global eInvoicing strategy does more than hit compliance checkboxes, it establishes the structured data foundation necessary for AI innovation. By centralizing vast amounts of invoice data and blending your internal data with external market intelligence, Billtrust helps you move past data engineering challenges and achieve the accurate predictions you expect from AI automation tools. Thanks to 24+ years in the business, Billtrust maintains the industry's largest financial data network for AI insights and transformative business outcomes powered by Agentic AI.

# Tipping Points and Pivotal Moments

As global eInvoicing mandates accelerate rapidly, the world is reaching a tipping point where digital transactions will soon replace paper-based or PDF invoices. Over the next 5 years, finance leaders face a pivotal moment as regulatory deadlines converge amid rising invoice volumes. When multiple requirements take effect simultaneously, the impact will be significant, changing the way companies manage invoicing, tax reporting, and compliance.

Organizations that act now, by adopting a strategic plan backed by advanced automation, will not only meet compliance requirements but also gain a competitive edge. As eInvoicing becomes a standard business practice, early preparation and a cohesive strategy will be essential for managing risk and ensuring global operational continuity.

## Global Invoicing Rules Got You Twisted? Untangle Compliance with Billtrust.

One platform is all you need to comply with eInvoicing regulations across many countries.
