Public Website Accessibility Test Report

Analog Informatics Corporation | October 11, 2026 | Scope: https://analoginfo.com

Scope and Method

This evaluation covered all 157 URLs in the public sitemap, including Search. Testing used Microsoft Edge with Playwright and axe-core 4.14.0. Automated rules covered WCAG 2.0 A/AA, WCAG 2.1 A/AA, and accessibility best practices. Revised Section 508 incorporates WCAG 2.0 A/AA for web content; the additional checks broaden this test without replacing a full conformance evaluation.

Verified Results

- Automated checks: the final 157-page scan detected no violations under the selected axe-core rules.
- Responsive layout: 628 checks across 157 pages at 1440, 1024, 390, and 320 CSS pixels found no page-level horizontal overflow. Wide data tables can scroll within their own containers.
- Expandable content: 330 visible FAQ and gallery summary controls opened with Enter and closed with Space.
- Screenshot dialogs: 121 visible triggers opened with Enter, kept focus inside during eight Tab presses, closed with Escape, and returned focus to the trigger.
- Shared navigation: seven submenu controls opened with Enter, closed with Escape, and restored focus. Desktop search focused its input; the mobile menu opened with Enter and closed with Escape.
- Images and media: no missing image alt attributes and no audio or video elements were found in the parent pages. This does not establish that every alternative description is accurate.

Repairs in This Review

- Removed nested duplicate header and footer landmarks while retaining the existing visible design.
- Named nine empty column headings across eight pages.
- Added a main landmark and underlined text links on the CMMC comparison scorecard.
- Corrected four blog buttons to white text on the site navy background, including the browser text-fill property.
- Corrected long source URL wrapping, table containment, and FAQ arrow positioning at narrow widths.
- Added explicit Tab and Shift+Tab cycling for open dialogs.

Section 508 Status and Remaining Evaluation

This is a website accessibility test report, not a completed VPAT or a certification of full Section 508 conformance. Automated results and scripted keyboard checks support only the cases described above. Criteria outside those cases remain Not Evaluated rather than Supports.

A complete determination still requires manual screen-reader testing, reading and focus order review, alternative-text accuracy, all visual contrast and focus states, browser zoom and text spacing, cognitive clarity, error identification and recovery, and end-to-end embedded CRM form testing. Existing downloadable documents, external sites, and the AIC Server console were outside this website evaluation. The new PDF includes document structure tags; PDF/UA conformance has not been independently validated.

The separate AIC Server Accessibility Conformance Report remains available and applies only to its stated console version and tested scope. It has not been replaced by this website report.

Accessibility Assistance

Report a barrier or request an accessible alternative at support@analoginfo.com. Include the page URL, the task you were trying to complete, and the browser or assistive technology used.
