AIC and Delinea: Privileged Access Comparison

Compare the exact product and licensed scope. AIC Enterprise Privilege Suite™ is modular and priced by quote. AIC Privileged Access for Microsoft CMMC is a separate published package, not the price of the full enterprise suite.

Choose the Correct AIC Package

Package	Price Basis	What to Confirm
AIC Enterprise Privilege Suite™	By quote	Selected PIM, PAM, PUM, governance, session/recording capacity, and evidence modules.
AIC Privileged Access for Microsoft CMMC	See AIC CMMC Complete™ Pricing for this package's current price and minimum order. It is separate from the full enterprise suite.	Exact package entitlements and system allowances. Do not assume the enterprise PAM recording module is included.
Delinea	Request a matched current quote	Confirm vaulting, rotation, brokered access, endpoint elevation, session recording, integrations, and edition-specific limits in the quote.

Compare the Same Work

Use identical privileged users, managed assets, concurrency, protocol coverage, recording retention, deployment, support, and term. Separate software from hosting and services. An old catalog, an unspecified buyer median, or a workforce password-management seat is not a current matched enterprise PAM quote.

Document sharing and training do not replace workforce credential management. Price each required function in its own category.

Unlimited free migration assistance is delivered directly and in coordination with your staff, MSP, and solution providers. Your infrastructure, third-party products, independent assessment, and any separately agreed managed services remain separate costs.

Validate Your Requirements

Confirm vaulting, rotation, brokered access, endpoint elevation, session recording, integrations, and edition-specific limits in the quote.
