

Cookie policy

How Navtori uses cookies and similar technologies on www.navtori.com, what they do, and how you can manage them.

Last updated: 18 October 2026

About Navtori

Navtori provides facilities management and related services. Company number: 15974002. Registered on 24 September 2024. This policy covers the public Navtori website. Separate applications and websites reached through external links may have their own storage arrangements and notices.

What are cookies and similar technologies?

Cookies are small pieces of information a website stores in your browser. They may be sent back when you visit again. Local storage is a different browser technology that keeps information on your device without automatically sending it with every request. This policy describes both. Session cookies normally last for your browsing session; persistent storage remains until its expiry rules apply or you clear it.

The categories in our current setup

Security: the hosting service uses a cookie to help apply traffic limits and protect availability. Preferences: Navtori can remember your essential-only cookie choice when you choose Save essential only. Analytics and performance: no optional audience-measurement tool is configured in the public pages checked for this policy. Advertising and targeting: no advertising tracker is configured in those pages. Other personalisation: no language, region or advertising-profile storage is configured by the policy-page controls.

Cookies and storage inventory

The following items describe the security cookie observed in public-page responses and the preference storage implemented by Navtori's cookie settings. Browser settings, security conditions and future website changes may affect what is present.

_cfuvid

Type	Security cookie
Domain / scope	www.navtori.com
Provider	Cloudflare, through the hosting service
Purpose	Distinguishes visitors sharing an IP address so the hosting security service can apply rate limits.
Duration	Session; no fixed expiry was supplied in the observed response.
When it is used	May be set when visiting the public website.

navtori.cookie-preference.v1

Type	First-party local storage
Domain / scope	The Navtori origin where the choice is saved
Provider	Navtori
Purpose	Remembers the essential-only choice, version and expiry time. No name or email is stored in this record.
Duration	183 days (about six months). The page stops using and removes an expired record on the next visit; browser data can remain until that check or manual clearing.
When it is used	Written only when you select Save essential only.

Hosting and external services

The public website is hosted on Webflow and delivered through hosting and security infrastructure, including Cloudflare. The `_cfuvid` cookie helps distinguish visitors sharing an internet address for security rate limiting. It is not an advertising cookie. The contact page currently shows an unconnected CAPTCHA placeholder; an active CAPTCHA service is not loaded by that placeholder. If that service is enabled, its storage and privacy information will need to be reflected in this policy. Links to external websites do not make this policy apply to those websites. Tori application storage is outside the scope of this public-website inventory.

Your choices

Open Cookie settings on the Policies page or in its footer. Save essential only records your preference; Close leaves the dialog without saving a new preference. There is no Accept all option because the current controls have no optional analytics or advertising categories to enable. Security cookies are managed by the hosting service, not switched off by the preference dialog. These controls apply on the browser and website origin where you save your choice; a different device, browser or subdomain may have a separate record.

Clearing or blocking storage

You can remove the saved preference through your browser's site-data settings, and block or delete cookies there. Clearing it means a later saved preference starts a new retention period. Blocking storage prevents Navtori from remembering your choice, but the policy pages remain available. Blocking the hosting security cookie can affect access where traffic limits are applied, especially on shared internet connections. Your browser may offer to restore session cookies when it restores a previous browsing session.

Changes and questions

We will update this policy when the website's storage or integrations change and show the updated date. Any optional tools requiring consent should be configured to respect the relevant choice before they run. For questions, use the Contact link at www.navtori.com/contact. Read the Privacy policy at www.navtori.com/policies#privacy for more information about personal information.
