

Brydg Token Tokenomics

3 SEPTEMBER 2026 · SUMMARY OF THE WHITEPAPER; THE TERMS OF SALE GOVERN.

The token in one line

A fixed-supply token on BNB Chain entitling holders to **15% of Brydg's gross revenue**, as a first claim, paid in **stablecoin**, claimable each accrual period.

Supply

PARAMETER	VALUE
Total supply	10,000,000,000
Inflation / emissions	None. Supply is fixed at TGE; no mint function after deployment
Provider rewards from supply	None. Providers are paid in stablecoin from execution revenue
Chain	BNB Chain (EVM); pre-sale payments accepted on Ethereum, BNB Chain and Tron
TGE	Target July 2027, or one month after the provider app ships publicly, whichever is later

Allocation and unlock

ALLOCATION	SHARE	TOKENS	UNLOCK
Pre-sale (public)	65%	6,500,000,000	100% at TGE. No vesting
Treasury & ecosystem	12%	1,200,000,000	Against published programmes; earns no distributions while held by Brydg
Liquidity	10%	1,000,000,000	At TGE as required; disclosed at TGE
Referral & marketing	5%	500,000,000	Bonuses: 40% at TGE, then 20% per month over 3 months
Team & advisors	5%	500,000,000	12-month cliff, 36-month linear
Strategic partners	3%	300,000,000	Milestone-based; 12-month minimum cliff
Providers	0%	0	Not applicable; paid in stablecoin

Majority of supply is sold to the public. Unsold pre-sale allocation at TGE is transferred to treasury or retired; treatment published at TGE. Unreleased team, partner and bonus tokens earn no distributions until released.

The entitlement

FORMULA (FIXED IN THE TERMS OF SALE)

Gross revenue (period) = Σ over cohorts of (take rate $\times$ provider payouts settled in period)

Take rate = 30% direct-acquired supply; 35% telco-bundled cohorts

Holder pool (period) = $0.15 \times$ Gross revenue (period)

Per-token distribution = Holder pool $\div$ tokens outstanding and entitled at snapshot

Distribution asset = stablecoin. Brydg never mints or buys tokens to pay holders

PARAMETER	VALUE
Holder share	15% of gross revenue; first claim, before any cost; non-discretionary; outside governance permanently
Accrual	Continuous: 15% of the take is segregated at the settlement of every verified job
Accrual period	Quarterly (proposed)
Snapshot	Published block at period end; excludes treasury and unreleased team, partner and bonus tokens
Claiming	Pull-based Merkle distributor per period; holder pays own fee; claim window 24 months (proposed)
Reporting	Per period: gross revenue by cohort, payouts, pool, snapshot block, Merkle root, claims, treasury reconciliation
Other utility	Priority access to enterprise buyer accounts and operator programmes above a published threshold; phased governance over distribution parameters only

Pre-sale structure

PARAMETER	VALUE
Structure	Flexible stages; each stage priced above the last; Brydg may revise stage count, prices, sizes and timing, publishing every change before it takes effect
Buyer protection	A completed purchase is never repriced; price and FX locked for 15 minutes at quote; purchases crossing a stage boundary auto-split and shown before signing
Milestone linkage	Stage 1 funds the build; Stage 2 opens on the first signed execution contract; later stages against published milestones
Progress disclosure	Percentage of current stage allocated. Dashboard shows purchase price vs current stage price, percentage difference, and the published ladder
Payment	USDT, USDC, ETH, BNB via connected wallet on Ethereum, BNB Chain or Tron
Referral	Single level: 25% of a referred purchase to the referrer; 5% first-purchase bonus to the referee; bonuses release 40% at TGE then 20% monthly over 3 months; clawback on voids

PARAMETER	VALUE
Identity	Tiered verification; thresholds set by counsel and applied as buyers approach them; wallet screening from Tier 1
End	At TGE or full subscription, whichever first. No refunds. Restricted jurisdictions excluded
Pre-TGE holding	A recorded allocation at purchase price; not transferable, not redeemable, no market value until TGE

Illustrative ladder shape (terms set per stage and published before each stage opens): 8 stages, shares 10/10/12/12/13/13/15/15% of the pre-sale allocation, price steps of roughly +20% to +25% per stage.
