QUANTIFIND

You're the Guardian of Your Institution's Reputation

Protect it with Quantifind Precise Risk Intelligence

Higher education institutions are a beacon of knowledge, innovation, and significant traditions. Their storied histories and distinguished alumni testify to their commitment to excellence. Upholding this reputation through ethical donor Relations, financial stability, and transparency is critical to sustaining the success of the university. In this pursuit, the adoption of advanced technologies like risk intelligence automation become a vital solution, aiding institutions in making informed decisions to safeguard their legacy for the future.

Why is risk intelligence so important?

- **Preserving Reputation:** A university's standing is vital. Missteps in donor choices risk public scrutiny. Quantifind risk Intelligence quickly and accurately surfaces relevant risk signals across billions of data points and equips researchers with real-time information, enabling them to make stronger decisions.
- **Strategic Decision-Making:** Quantifind risk intelligence identifies vital trends amid changes in your donor base, enabling you to prevent reputation risk.
- **Ethical Considerations:** Beyond surfacing critical financial risk signals, Quantifind AI also gives researchers an indication of donor ethics, preventing a negative association with your institution.
- **Adherence to Legal and Regulatory Compliance** - As you consider how to raise funding, better decision-making helps keep you within the bounds of applicable laws and regulations.

Quantifind helps you outsmart risks

With Quantifind precise risk intelligence automation, institutions are empowered to understand their donors far better and faster to uncover potential risks in the context of global information. Quantifind has helped many prominent institutions uncover relevant risk signals with supreme accuracy, speed, and scale. Quantifind's AI platform streamlines risk management by delivering superior entity resolution for risk identification, assessment, and investigation. Our deep expertise in AI has been honed over a decade of pioneering work in risk management and is fueled by state-of-the-art AI, ML, precise language models, and Natural Language Processing (NLP) techniques.

Case Study

University example of time spent researching a donor

1 Minutes per investigation	10 minutes	10 min x 25,000 searches	1 Search time
2 Number of searches	25,000 searches	1800 minutes spent by 4 researchers	2 Team minutes in a workday
3 Individual working hours/day	30 hours per person	139 working hours/day for 4 researchers	3 Team working hours/day

This case study shows the impact a one-time batch of 25,000 names can have on a team of four investigators. This university was averaging approximately 10 minutes of manual Google searching per investigation. With a team of four, this

limited them to researching only the largest and most publicly facing donors.

Results after working with Quantifind.

Quantifind ran this batch of 25,000 names on the same day, returned results in seconds, and **saved the team almost 140 days of full-day manual labor.** The team could then work on the less than 5% of alerts returned and finish screening the entire donor population in less than 2 weeks.

A Data-Driven Approach

Risk Identification

Easily build accurate risk profiles in realtime by tapping into vast public and licensed data that will surface risk signals of Sanctions, PEPs, crime, foreign influence, and ESG.

Risk Assessment

Once risks are identified, assess their impact. Surface accurate risk factors in seconds and reveal the entities related to a known individual or business.

Automated Investigations

Curate a specific risk profile using Quantifind risk cards authored by experts and automatically search your entire donor base, only presenting results that match.
