QUANTIFIND
THE RISK INTELLIGENCE COMPANY

You know the risk is there. You just can't see it.

HIDDEN RELATIONSHIPS JEOPARDIZE SECURITY.

Behind every individual and organization is a web of unreported relationships, which may influence or compromise them.

Quantifind's Graphyte™ platform helps public-sector teams rapidly assess vendors, partners, landowners, and other entities by fusing global **open-source data** with advanced network analysis. The easy-to-use platform automates due diligence and flags operational, financial, or national-security risks **before they enter your supply chain or take root in critical relationships.**

A unified relationship network surfaces risk, ownership, and transaction patterns in a single view.

Enhanced Due Diligence

Rapidly evaluate vendors, partners, investors, or landowners by resolving identities, expanding networks at scale, and surfacing mission-relevant risk indicators.

Investigations & Intelligence

Accelerate casework with multilingual entity resolution, automated network expansion, and explainable, evidence-backed insights that reveal patterns, relationships, and indirect risk across degrees of separation.

Economic Defense & Resource Security

Identify foreign ownership, control, and influence by uncovering shell companies, layered investments, and high-risk ties that threaten critical infrastructure, resources, or other interests.

QUANTIFIND
THE RISK INTELLIGENCE COMPANY

Why Quantifind?

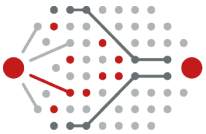

Fewer false positives, less manual work

High-precision entity resolution reduces noise so teams can move faster with fewer resources, focusing on real risk instead of cleanup.

See the full network, not just the name

Proprietary name science connects records across languages and jurisdictions to expose shell companies, true ownership, and hidden relationships beyond the first hop.

Expand your search, then focus where it matters

Start with an entity of interest, automatically map its network, and quickly narrow back down to mission-specific risk.

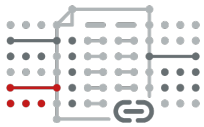

One platform, all the non-traditional data you need

Sanctions, watchlists, PEPs, regulatory actions, global corporate records (including Chinese-language), court data, supply-chain and trade data, adverse media, and commercial sources—unified in a single, easy-to-navigate knowledge graph.

Built for speed and scale

Run one search or one million with the same accuracy and defensibility, supporting batch screening, continuous monitoring, case management, and one-off analysis.

Clear, defensible results

Every finding is evidence-backed, source-linked, and audit-ready, with IC-compliant reporting designed for real operational and legal scrutiny.

Designed to integrate and share

Exportable results and API integration support collaboration across agencies, partners, and existing workflows.

Secure and responsible by design

SOC 2–compliant SaaS with enterprise-grade controls, using transparent, responsible AI models informed by more than 60 continuously updated risk typologies.
