creating tables that heal.

serveware made from

rice husk and rice straw

our serveware in rice are:

biodegradable

earth friendly

soil to soil

freezable

home grown

animal edible

holds wet

holds warm food

rice husk plates.

Earth-sensitive, biodegradable, and disposable snack plates made solely with rice husk and straws, giving paddy residues new purposes.

Available in two dimensions:

Snack Plate: 7.9"
Dinner Plate: 10"

The simple soil-to-soil plates with which the brand was begotten. Degrading in thirty days upon disposal, these plates do not hold any chemical or artificial adhesives. Here, the rice husk and rice straw is made into a mulch which becomes the plate through a process of moulding and steaming.

The plates are animal-edible, a requisite that was reiterated at the moment of creation. They are made with characteristics that enable them to be microwaveable and freezable, holding wet or curried food.

tumbler.

Kulhad-like biodegradable tumblers created using rice husk and rice straw, and using no manner of artificial agents or linings. To convey more accurately, these tumblers are rice straw and rice husk mixtures moulded at a high temperature. They hold water (or, any liquid hot or cold) naturally for sixty minutes.

tumbler.

Hold capacity: 180ml

serveware made from

natural bagasse

The sugar cane plant based natural bagasse array became a sensible range principled to become more accessible and variant disposable wares of sensibility.

These include sauce or dip bowls, salad bowls, dinner and snack plates, compartmentalised ‘canteen’ plates and takeaway containers. These are disposables that will degrade in ninety days and that cater to specific or everyday disposable table requirements.

Approved as leak-proof, microwaveable, and without the presence of carcinogens or any other toxic chemicals, these serveware are compostable, leaving no trace or scar of use.

waste after an event: zero.

qudrat was birthed with a purpose to encourage social events and gatherings that are sensitive to the necessity of kinder communal and personal eating routines. We try to replace single-use paper and plastic serveware with what we know to be sensible serveware for the planet. Made using zero artificial adhesives, zero linings, and zero coatings, our disposable snack plates are safe to use, degrading within ninety days of disposal.

soil to soil.

why we do what we do.

Our biodegradable serveware is created from a conscious urge to create tables and eating communions that heal. We are taking care to grow conscious efforts to become a sensible choice in biodegradable and disposable tableware, one good straw, snack plate or tumbler at a time.

With a team that is aware of the sustainable needs of the day, we work from fertile factory space that is adept in evolving to the growing demands of the communities we cater to.

Our efforts are to heal the very waters, soils and creatures that sustain our fragile race.

connect. heal.

A family of earth-sensitive individuals who came together to create ranges of agro-based and biodegradable tableware that finds relevance as alternatives to plastic, paper and other disposable tableware.

Rooted in Trivandrum where qudrat finds strength in purpose and pragmatic researches, we work towards creating everyday sustainable lifestyles that are easily accessible to any individual with a desire to do their bit to reduce carbon footprints.

An initiative under Marikar Green Earth, Trivandrum.
