

Building Layout & Orientation Considerations:

1. East & North property lines are visually unappealing. Both property lines have development which can be seen through vegetation.
2. Consider orienting house to solar North for passive solar opportunities. By doing this, the orientation takes advantage of solar considerations and allows opportunity to open house views up to the lake, fish camp, etc... (All much better vistas than East/North property line)
3. Opportunities exist with this orientation to arrange major rooms such as the family, master bedroom suite, as well as the outdoor terraces to take advantage of views to the lake, live oaks, etc...
4. Orientation allows approach to house to be a better arrival views as house is square to approach driveway.
5. Orientation allows for support uses of building to be located on the North side of the building such as driveway, garage, mud room, etc...
6. It is envisioned that this orientation to solar North will present passive solar opportunities as well as orient the building so that the major spaces both indoors and outdoors are sited to take advantage of on-site development, vistas of the lake, and create an attractive arrival for owners and guest.
