

Fuel, EV charging, and tank gauging

SimplyFuel Software

One platform for automated, integrated fleet management

Introducing SimplyFuel SaaS. This isn't a rebrand of our Fuel View SaaS; it's a complete re-engineered architectural and UI overhaul for a more streamlined, seamless and intuitive workflow.

Redesigned User Interface

- **Cleaner intuitive workspace** Reduced visual clutter help you focus on high-priority data, making the software feel less like a tool and more like a high-performance command center.
- **Reorganized Navigation** By grouping key workflows logically, we've shortened the path to your most frequent tasks like reconciliation and fuel ordering.
- **Dashboard** Action Cards turn insights into action immediately. These interactive cards don't just show you data; they allow you to trigger workflows—like jumping directly into editing a vehicle or resetting a user's password—directly from your home screen.
- **User Customizable Dashboards** Drag, drop, and resize the metrics that matter most to you—whether it's usage by department or vehicle, inventory levels so your big picture is always front and center.
- **Deep Filtering & Search** Enhanced search engine lets you drill down into years of transaction data using complex criteria, turning looking for data into finding answers.
- **In-App Alert Notifications** Stay ahead of critical issues without leaving the platform. From suspicious transactions to low-tank warnings, real-time alerts ensure you can respond to operational risks the moment they happen.
- **Advanced Admin Capabilities** Take total control of your operations with granular permissions to create unique roles for each job function. You also now have the ability to change labels on certain fields right from the interface.
- **Favorite Reports** Bookmark your most essential data views for one-click access, ensuring your key performance indicators are always ready to print on demand.

See our SaaS brochure for full security and SOC2 certification details.

What's Improved

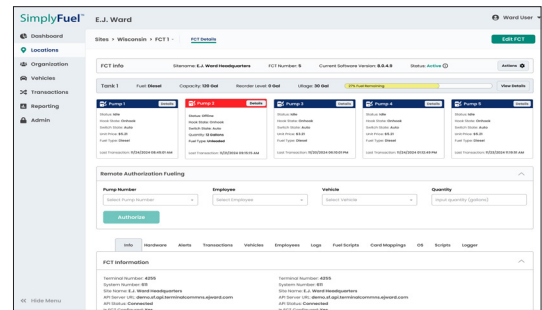

- **Performance** The new platform is 'lighter.' Load times are reduced so that even with massive data sets, the software keeps up with your fleet.
- **Status Page** The new Status page delivers a "Site Health Score" at a glance. It provides a data to shift from reactive to proactive maintenance.
- **Rapid Updates** SimplyFuel provides a continuous delivery model. This means you get security patches and new features instantly, with zero effort on your end.
- **FCT Oversight** We've tightened the 'handshake' between the software and the hardware. Millisecond-precision control over fuel dispensing provides even more enhanced security needed for today's world
- **EVSE Integration** No need for separate platforms for your EV chargers. We've brought EV management into the same workflow as your Fuel Control Terminals for total oversight and reporting.

Interfaces

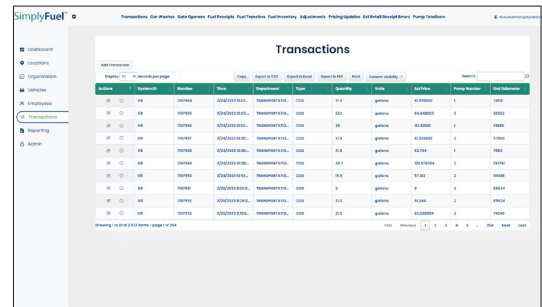

Completely customizable security features. Define user access levels to assets by division or location; specify levels in any configuration or combination.

- ✓ Fleet Management
- ✓ GPS/AVL
- ✓ EV Chargers
- ✓ Accounting
- ✓ Security
- ✓ HR

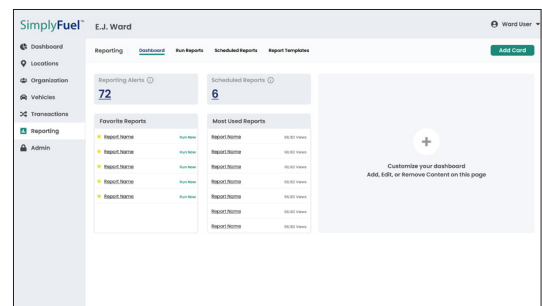

i Options run from flat file exports to complete web services database level exchange API's.
