

RxAlly Patient Care Coordinator (PCC) starts process and sends referral to Pharma Strategies

Pharma Strategies sends enrollment link via email to eligible member

Member completes registration and sets up telehealth session with Pharma Strategies physician

Once telehealth visit is completed, BioPlus contacts member to confirm medication shipping details

Member pays any applicable copays and begins receiving medication via mail order

Overview

MedOne's RxAlly suite of specialty cost containment solutions exists to help members gain access to the medications they need and combat the rising costs of specialty medications. The Enhanced Procurement Program (EPP) features a partnership with Pharma Strategies, an organization focused on lowering the cost of specialty medications. This program unlocks exclusive, lower pricing for specific specialty medications resulting in lower costs for clients and added convenience for members.

This program "enhances" existing plan design and is geared toward helping members better manage chronic health conditions. It requires little lift from the member and the only shift disruption associated with the program is a change in dispensing location. Once enrolled, members receive their prescriptions via mail order through the program's preferred pharmacy partner: BioPlus. This increases the convenience factor and offers lower pricing for the plan sponsor. Additionally, claims submitted through EPP are also eligible for rebates and the Copay Assistance Program: a true win-win!

How It Works

MedOne's Patient Care Coordinators help members enroll in the Enhanced Procurement Program, connecting them with Pharma Strategies. In order to be eligible, members must:

1. **Be 18 Years or Older**
2. **Complete Member Enrollment Process**
3. **Conduct Annual Telehealth Consultation**

If a member meets this criteria and is taking a medication on the EPP Drug List, they will walk through the steps outlined to the left in order to begin sourcing their medication through the program.

Implementation

To begin implementation of the Enhanced Procurement Program, MedOne needs a 3-month summary of prescription claims data, and the program can be implemented at any time.

Monthly reporting outlining the performance of this program will be available via the regular reporting package supplied by the designated account management team at a regular cadence.
