New High Power Heating Jackets

LMK Thermosafe are pleased to release a new range of High Power Flexible Heating Jackets for general industrial applications where efficiency and speed of heating are important parameters.

First to be introduced is a dual circuit jacket designed for standard 200 litre drums, with sufficient power to melt most standard solids.

Launch customer Cornelius Chemicals found the heater ideal, and their Production Manager commented:

"The heating blanket was used to melt a heat sensitive chemical where surface temperature control is critical.
With this unit we managed to achieve excellent temperature control and fast melt times without affecting the chemical and physical properties of the chemical."

Cornelius Specialties
TECHNOLOGY | CLARITY | VISION

Standard sizes are available from our large inventory, from 20 litres upwards, and custom sizes can be designed to your container measurements.

Product Specification

Single Phase 110v or 240v versions, 50/60Hz ac
Power consumption: 2.06kW (2 x 1030 watts) nominal
Thermostat range: -10 – +160℃ as standard

Overall length: 1950mm
Overall height: 850 mm
To fit a standard 200-210L drum

Class II Appliance
Ingress Protection IP54
CE/UKCA marked to relevant parts of LVD, EMC and ROHS EU Directives.

Registered in England No. 3959310
VAT No. GB 759 6388 64
