THERMOSAFE® Lifting Frame

To accompany the award-winning Thermosafe Induction Heater, LMK manufacture an easy to use mobile lifting system for applications where fixed mechanical handling is not appropriate.

Designed specifically for use with a Thermosafe Induction Heater, the Lifting Frame offers a simple solution to the day-to-day operational requirement that may occur in a busy production environment. Due to the unrivalled heating rates of the Thermosafe, frequent drum changes to heat more products with the same heater can often be required.

A Thermosafe can be moved quickly and easily by just one operator to drums situated at their point of use.

The sturdy steel frame is fitted with a braked winch with a safe-working-load significantly greater than either one Thermosafe Type A or two Type B heaters. Robust casters are fitted to the frame for full maneuvrability and simple retaining bars and clips are used to secure and quick release the Thermosafe.

The Lifting Frames are certified to the requirements of the ATEX Directive 94/9/EC for non-electrical equipment and Machinery directive 98/37/EC, when used with Thermosafe units. They can be supplied in two base widths; a wider width to incorporate drums on pallets, or a standard unit for applications where this is not necessary.
