

ETHERNET COUPLER BXF & BAF SERIES

Solexy's Patented (7,507,105) explosion-proof and intrinsically safe ethernet couplers allow for the transmission of ethernet into hazardous locations with a standard ethernet cable.

With our ethernet coupler it's possible to connect any standard device located in hazardous or safe area.

The BXF is an EXd and EXi barrier and is certified for installation in hazardous location, it has been designed to be screwed directly into an explosion proof enclosure cable entry, without the need of a seal fitting and taking no internal space.

The BAF is an EXi barrier is suitable for installation in safe area or purged panels.

A BXF and/or BAF coupler is required on each end of the cable for full protection of both the RX and TX lines.

FEATURES

NO SEALING FITTING REQUIRED

BXF couplers are pre-approved for hazardous locations and can be installed with a simple wrench and no potting compounds. Eliminate the need of costly seal fittings and reduce the chance of error associated with field sealing installation practices.

ENVIRONMENTAL PROTECTION

All the integrated circuitry is recessed and encapsulated against harsh environments; This is impossible with conventional sealing method.

CORROSION RESISTANT

The couplers, made from 300 series stainless, protect the fitting from corrosive environment.

INTERCHANGEABILITY

Ethernet cables can be HOT connected or disconnected without powering off the system. This is critical for temporary connections such as PLC or VFD programming.

INDUSTRIAL M12 "D" CONNECTION

With this secure weather proof connection cable installation and removal can be accomplished without removing power.

APPROVALS

ATEX / IECEx CERTIFICATION

INSTALLATION SCHEMES

DEVICES INSTALLED IN HAZARDOUS AREA

A BXF coupler must be used at either end of the ethernet cable to ensure the safety of the system. The BXF must be securely mounted and grounded within a certified explosion proof enclosure.

DEVICES INSTALLED IN BOTH HAZARDOUS AREA AND SAFE AREA

One BXF and one BAF coupler must be used at opposite ends of the ethernet cable to ensure the safety of the system.

Data contained in this specification are subject to change without notice

DEVICES INSTALLED IN SAFE AREA (CABLE IN HAZARDOUS AREA)

A BAF coupler must be used at either end of the ethernet cable to ensure the safety of the system.
