Here are a few tips to help extend the life of your new headset:

- 1 Do not connect the headset to an electrical outlet or other high-voltage power sources. This may damage the device's circuit board and render the headset inoperable
- 2 Do not use the headset in wet environments (in the rain or during sports). If moisture gets into the headset, turn it off (disconnect) immediately and contact a service center.
- 3 We strongly recommend using the supplied cable for wired connections.
- 4 Keep your headset clean and take care of it regularly. This will help extend the life of your device.
- 5 If you decide to replace the ear pads with the ones included in the set, we've designed the headset to accommodate this. Replacing the ear pads does not affect the warranty, so you can swap in the included pads without any problems and still retain your warranty.
- 6 The warranty period is 12 months from the date of purchase. If you have questions or problems after the warranty expires, please contact our technical support team. We're happy to help resolve any issues, even after the warranty period has ended.
- 7 Please take good care of your headset. We really aimed to make the Nubi NH1 the best option and invested a lot of time, effort, and money into developing this new headset line. We built it the way we'd want to use it ourselves ♥

SWITCHING EQUALIZER MODES

2 The audio indicator will notify you of the change.

3 EQ sequence: **Clean** > **Game** > **Bass** > **Vocal**, looping back to **Clean**.

EQ

Clean – equalizer mode with a smooth, studio-monitor-like sound, high quality and detail. Great for most tasks, from gaming to audio work.

Game – equalizer mode designed mainly for gaming. We cut the lows and boost the mids to make footsteps easier to hear, while keeping explosions and gunshots from masking your position. The highs remain unchanged.

Bass – equalizer mode for bass lovers. It emphasizes the low frequencies, while mids and highs stay close to their default values.

Vocal – equalizer mode with more emphasis on high frequencies. We've raised the highs to make voices more expressive. The lows and mids remain unchanged.

If you want more detailed sound control, we recommend installing the Nubi software. It lets you adjust the EQ, microphone noise reduction, and many other headset features.
