At Premier Energies we recognise the social, economic, environmental, and cultural value of water and the increasing global concern of water scarcity. Water is a key resource for all our operations - required for the health and wellbeing of employees and at every stage of an operation's life cycle, including closure. The dependency and impact on a shared resource creates material risk for our business, which requires effective management that balances the needs of many different users.

Premier Energies will:

- comply with applicable national, regional and local regulations on water;
- respect that water is a shared resource between industry, communities and ecology and ensure that our operations do not negatively impact that shared balance;
- publicly report on the company's water performance using consistent industry metrics and recognized approaches;
- undertake periodic water-risk management that inform the company's water management strategies;
- avoid pollution of surface water, ground water and other water resources. We will apply a zero-discharge philosophy wherever possible and treat all wastewater to good international practice before discharging to the environment;
- ensure that water and waste-storage facilities are engineered and maintained to good international standards;
- understand our water footprint at all our projects and operations, and maintain a water-balance that minimises the amount of freshwater consumed;
- identify water conservation projects through reduction, recycling and reuse and monitor progress against water consumption reduction targets across our businesses;
- participate in local or regional water catchment planning activities to secure sustainable water resources for our operations and the activities of other users;
- determine baselines and develop ongoing monitoring of water quality;
- work with communities and communicate with all our stakeholders on the progress and performance of water conservation and management.

This policy is part of the PREMIER ENERGIES` Sustainability Framework and each PREMIER ENERGIES` business shall implement this policy and its related technical and performance standards. Business leaders will be held accountable for water-related performance and line managers are responsible for the full implementation of the related water standards. We will measure and report performance on a periodic basis to ensure on-going management of water resources including the sharing of good practices throughout the organization. The content and implementation of this policy will be reviewed periodically.
