Keeping Distribution Moving Under DSCSA

Built to support daily verification, partner connectivity and audit readiness

Your DSCSA Challenges as a Pharmaceutical Distributor

The Drug Supply Chain Security Act (DSCSA) is no longer about preparing for a deadline. For distributors, the real challenge today is operating DSCSA reliably at distribution speed, while meeting growing enforcement expectations and trading-partner demands. Common challenges include:

- Onboarding and coordinating upstream and downstream trading partners for Electronic Product Code Information Services (EPCIS) data exchange
- Executing saleable return verification consistently at high transaction volumes
- Managing Authorized Trading Partner (ATP) credentials across a large, changing partner network
- Tracing serialized data across shipping, transportation, receiving and aggregation events
- Reducing manual exceptions that slow warehouse operations and returns processing

As enforcement matures, distributors are expected not just to have systems in place, but to demonstrate repeatable, auditable processes that work every day, across every partner and facility.

DSCSA in Practice: From Compliance to Distribution Operations

DSCSA requires distributors to identify, verify and trace prescription drugs distributed in the United States. Today, the focus has shifted from initial compliance to inspection readiness, partner interoperability and operational resilience across warehouse and logistics operations.

Distributors are now navigating:

- Increased scrutiny during FDA inspections
- Trading partners enforcing stricter EPCIS and ATP requirements
- Higher volumes of verification and exception handling
- Pressure to maintain throughput while reducing manual workarounds

Movilitas.Cloud addresses these realities by supporting product verification, ATP credential responses, aggregation handling, streamlined partner onboarding and reliable EPCIS data creation and exchange – helping distributors keep DSCSA running as part of daily operations, not as a bottleneck.

What You Gain with Movilitas.Cloud

Whether deployed as a stand-alone platform or integrated with systems like SAP ATTP, SAP ICH, TraceLink and others, distributors use Movilitas.Cloud to achieve:

- 100% sustained DSCSA compliance in live distribution operations
- 45% faster reporting processes, more reliable verification and exception resolution
- Reduced operational friction across warehouse and returns workflows
- Greater confidence during audits and partner reviews

End-to-End DSCSA Delivery, Backed by Proven Expertise

We combine a purpose-built DSCSA platform with deep implementation and regulatory experience to help pharmaceutical distributors operate compliant, resilient traceability processes at scale.

What We Deliver

- Movilitas.Cloud for serialized logistics and product verification
- Requirements definition, solution design and software configuration
- Deep integration with enterprise, warehouse and logistics systems

Why Manufacturers Trust Us

16 years supporting serialization systems and services

Early operational **adoption of ATP credentialing**

Active contributors to industry initiatives, including **HDA VRS** and **OCI**

"We chose IndX as our strategic partner for serialization projects and services based on their long-term industry record and profound expertise. The mobile solution of Movilitas.Cloud accelerates scanning activities and captures events at company warehouses. We got to know IndX as a very reliable and highly competent partner for any kind of serialization."

Andreas Eckerlin | Global Head SAP CC, Acino
