DSCSA at Scale in Pharmaceutical Manufacturing

A practical backbone for compliant, auditable pharmaceutical manufacturing

Your DSCSA Challenges as a Pharmaceutical Manufacturer

The Drug Supply Chain Security Act (DSCSA) is no longer about preparing for a deadline. For manufacturers, the real challenge today is operating DSCSA reliably at scale while meeting growing enforcement expectations and trading-partner demands. Common challenges we see include:

- Onboarding and coordinating downstream trading partners for Electronic Product Code Information Services (EPCIS) data exchange
- Handling saleable return verifications at scale
- Managing Authorized Trading Partner (ATP) credentials across partners
- Gaps in serialization and aggregation operations that create downstream exceptions
- Inconsistent or incomplete EPCIS data between CMOs, MAHs and logistics partners

As enforcement matures, manufacturers are expected not just to have systems in place, but to demonstrate repeatable, auditable processes that work every day, across every partner.

DSCSA in Practice: From Compliance to Operations

DSCSA requires manufacturers to identify, trace and verify prescription drugs distributed in the United States. Now, the focus has shifted from initial compliance to inspection readiness, partner interoperability and operational resilience.

Manufacturers are now navigating:

- Increased scrutiny during FDA inspections
- Trading partners enforcing stricter EPCIS and ATP requirements
- Higher volumes of verification and exception handling
- Pressure to reduce manual workarounds and data reconciliation

Movilitas.Cloud addresses these realities by supporting saleable return verification, ATP credential responses, aggregation handling, streamlined partner onboarding and reliable EPCIS data creation and exchange – helping manufacturers keep DSCSA running as part of daily operations, not as a side process

What You Gain with Movilitas.Cloud

Whether deployed as a stand-alone platform or integrated with systems like SAP ATTP, SAP ICH, TraceLink and others, manufacturers use Movilitas.Cloud to achieve:

- Sustained DSCSA compliance in live operations
- Faster, more reliable verification and reporting processes
- Reduced operational friction and lower exception-handling effort
- Greater confidence during audits and partner reviews

End-to-End DSCSA Delivery, Backed by Proven Expertise

We combine a purpose-built DSCSA platform with deep implementation and regulatory experience to help pharmaceutical manufacturers operate compliant, resilient traceability processes at scale.

What We Deliver

- Movilitas.Cloud for serialized logistics and manufacturing operations
- Requirements definition, solution design and software configuration
- Deep integration with enterprise systems and shop-floor execution

Why Manufacturers Trust Us

16 years supporting serialization systems and services

Early operational **adoption of ATP credentialing**

Active contributors to industry initiatives, including **HDA VRS** and **OCI**

Keep DSCSA Running Without Disrupting Manufacturing
