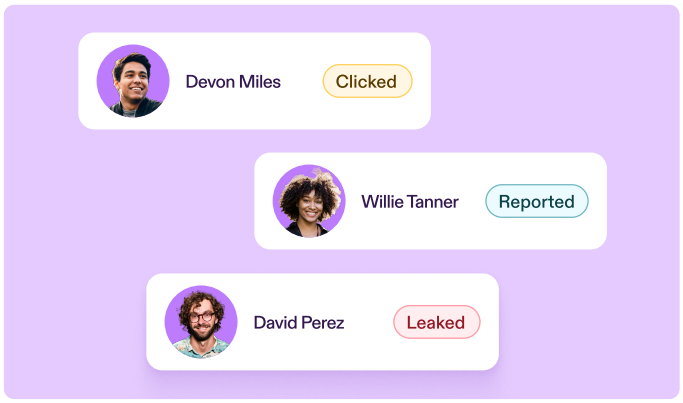
pistachio

Deliver cyber resilience to every customer, without adding operational overhead.

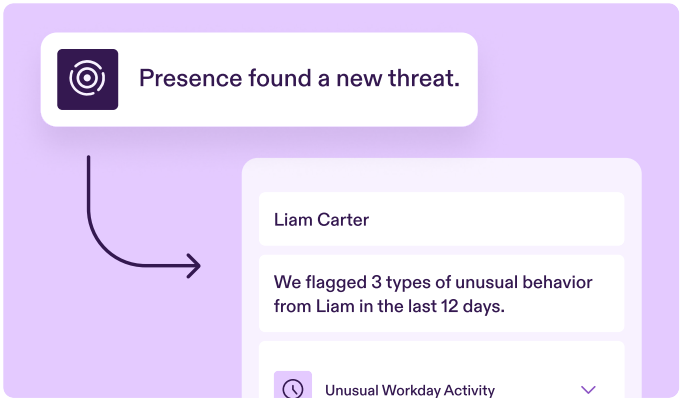
Automated security awareness training and insider threat detection designed for MSPs.

What we do:



Practice – Security Awareness Training

Personalised phishing simulations and training adapts automatically to every employee's role and behaviour. No campaigns to configure, no employees to chase, no reporting to manage.



Presence – Insider Threat Detection

Powered by behavioural AI, detect compromised accounts, departing employees, and unusual activity without rules, tuning, or analysts.

What's in it for you:

Fast customer onboarding

Connect via Microsoft Entra ID in four simple steps. New customers can be live in under 10 minutes.

Zero day-to-day admin

No phishing campaigns to run. No detection rules to maintain. Pistachio operates automatically once deployed.

Better protection at scale

Deliver smarter training and earlier threat detection than manual processes can achieve, consistently across every customer.

Healthy recurring margins

Simple partner pricing with strong margin potential from day one.

IT Synergy: Eliminating manual cybersecurity admin, at scale

- 23 customers onboarded
- Setup time reduced from 2–3 hours per customer to under 10 minutes
- Manual phishing campaigns eliminated, saving 2-3 hours twice a year per customer
- Once the service is expanded across all 150 customers it's projected to save 1,100+ hours annually, the equivalent of 28 working weeks.

> “The time we used to spend on setup and campaigns is gone. We can take on more customers without adding headcount and our customers are getting a better service than before.”
