The interior life of the child is the real curriculum. Most schools have no daily way to know it.

YouHue is an AI partner for teachers, turning what children share about their feelings into a clearer understanding of each child and practical ways to support them. Students say how they feel each day in under a minute. The picture of each child builds over time.

Known, not watched

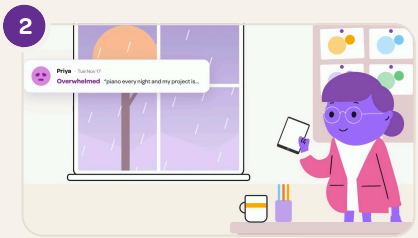

Knowing starts with invitation. Students choose what to share, in their own words, with the adults around them.

HOW IT WORKS

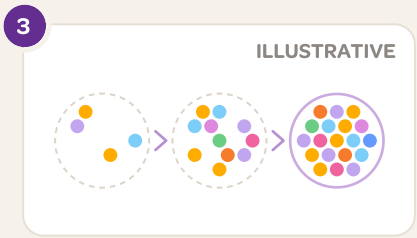

Every child checks in

Students choose how they feel and can add their own words, in under a minute.

Start with who might need you today

The teacher opens to students who might need a closer look, not a blank screen.

Let the picture build

Day by day, check-ins build a picture of each child over the months.

WHY YOUHUE IS DIFFERENT

Daily, not periodic. The picture stays current.

Proactive, not passive. The AI underneath supports teacher judgement and never replaces it. The teacher decides.

Universal and everyday, with safety as a floor. Most check-ins are positive or neutral. If something a child writes needs an adult right away, the teacher knows immediately, on every plan.

> *"Quieter children have shared things I would never have known."*
