OPTIMIZE YOUR ASSET INFORMATION MANAGEMENT WITH OUR COMBINED POWER SOLUTIONS

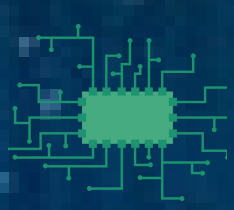

Our bundled solution Fiix CMMS and M-Files EIM gives you the leverage to experience a modern and efficient way to derive business value from all your content.

Fiix CMMS (computerized maintenance management system) is the first AI maintenance engine solution that helps to predict your future maintenance activities. Fiix is built specifically to help maintenance teams organize assets, manage work, and connect to other business systems such as **M-Files a EIM (Enterprise Information Management)** known as a Document Management solution that helps to centralize all your documents, automate your business processes., and make data-driven decisions

Benefits of Fiix CMMS + M-Files EIM: -

Increase Wrench Time - Maintenance document will automatically organized and indexed into M-Files which helps to improve your maintenance planning and scheduling by 30%

Centralized Documents - All your contents such as engineering documents, contracts, customer details, lease agreement, images, videos and other important information are stored in M-Files and linked to Fiix

Easy Access to the Updated Content - With open API, M-Files and Fiix are easily integrated and you get to enjoy the benefits of having access to the latest content at your fingertips

Improve Accountability and Communication - Both solutions help foster communication by documenting and storing information which in return provides visibility and transparency

Effective Maintenance Audit - Both solutions have a version history and the audit log helps you to prepare for yearly audit

Work Mobility - Work from anywhere and access every documents you need to get your work moving forward just a tap away using your mobile or tablet to access both solutions

Enhanced Security - Gain control of information security and permission matrix with both solutions

Improved Maintenance Productivity, Agility, and Responsiveness - Stay on top of your game by having all the specific information required in hand and your task with workflows and assignments

Eliminate Information Redundancy - Stop the duplication of the same copy, stop version chaos

Improve Regulatory Compliance - Non-conformance can lead to fined, revoked licenses, and in some cases, criminal liability. Having all your documents and records digitalized and automated can be more easily classified and stored with both solutions.

These two combined power solutions help the maintenance team to increase their wrench time as they can easily locate all the engineering data, drawings, and other related maintenance documents which is linked to the assets in the CMMS.
