swissnet Group modernizes WLAN Infrastructure at DRK-Clementinenhaus Hannover

Berg, Switzerland – 4 March 2026 – The swissnet Group (ISIN: CH0451123589 – Ticker: MLBMD), a leading provider of ICT solutions and cloud-based network infrastructures, is comprehensively modernizing the WLAN infrastructure at DRK-Clementinenhaus Hannover. The goal of the project is to reliably meet the increasing demands placed on wireless networks in clinical operations and to provide a high-performance, future-proof communications infrastructure.

As part of the project, more than 120 existing access points will be migrated. This is based on a detailed WLAN planning process conducted by swissnet's certified Ekahau consultants to optimally align the number, placement, and type of access points with the structural and functional requirements of the hospital.

Modernization is driven by significantly increased network demands, including the expanded use of digital applications, voice services, and the integration of additional medical and mobile devices. Special attention was given to sensitive areas such as operating rooms and cardiac catheter laboratories, where extended coverage and low latency are critical.

Additionally, the Clementinenhaus is introducing an AI-supported software solution from Ruckus, supported by swissnet. This solution enables continuous analysis and optimization of the WLAN environment, supports rapid identification of network incidents, and helps to assess user impact while providing comprehensive remediation options.

The project volume, including a five-year maintenance contract, amounts to approximately 200,000 euros. With this project, the swissnet Group strengthens its position as a specialized provider of high-performance network solutions for critical healthcare infrastructures and creates further potential for long-term managed-service partnerships in this market segment.

"With the combination of precise radio planning, high-performance WLAN technology, and intelligent software, we are laying the foundation for stable and secure digital processes in hospital operations. Projects like this demonstrate how swissnet reliably implements complex requirements in the healthcare sector," says Jonathan Sauppe, Group Co-CEO DACH at the swissnet Group.

About the swissnet Group

The swissnet Group is a leading provider of location-based marketing software (LBM), Wi-Fi infrastructure systems, and Wi-Fi guest hotspots. The Group serves customers in retail, hospitality, healthcare, and the public sector. With its subsidiaries, the swissnet Group also offers outstanding expertise in digital transformation and Software as a Service. With intelligent and fully cloud-based technologies, the swissnet Group supports companies in their omnichannel strategies and delivers tangible added value and success.
