Implement ZERO TRUST SECURITY in just 5 simple steps

Secure Access. Protect Data. Govern AI.

1. Discover AI & Critical Assets

Gain visibility into AI applications, users, devices, and business resources to understand what needs protection.

2. Verify Every Identity

Authenticate users with passwordless authentication, adaptive MFA, and identity-aware security before granting access.

3. Secure Application Access

Provide least-privilege access using Zero Trust Network Access without exposing your internal network.

4. Protect Sensitive Data

Prevent confidential information from being shared through AI tools, cloud applications, web traffic, or unauthorized channels.

5. Monitor & Enforce Policies

Continuously monitor activity, enforce security policies, and respond to threats across identities, applications, AI, and data.

Everything You Need. One Unified Platform.

Instead of managing multiple security products, Zaperon brings together identity, network, AI, web, and data protection into one integrated security platform.

AI Governance

Discover AI applications, govern AI usage, enforce organizational policies, and protect sensitive information across approved and shadow AI tools.

Zero Trust Network Access (ZTNA)

Replace legacy VPNs with identity-aware access that connects users only to authorized applications while continuously verifying trust.

Secure Web Gateway (SWG)

Protect users from malicious websites, risky downloads, phishing attacks, and unsafe internet activity with intelligent web security.

Data Loss Prevention (DLP)

Prevent sensitive information from being exposed across AI applications, cloud services, web traffic, and endpoints.

Identity & Access Management (IAM)

Manage identities, automate user provisioning, and enforce role-based access across all enterprise applications.

Cloud Access Security Broker (CASB)

Secure SaaS applications with complete visibility, access control, and policy enforcement across your cloud environment.
