About Evam

For too long, software in emergency response has asked people to adapt to it. More screens, more steps, more to remember. Meanwhile, the tools we use everywhere else have become simpler and more familiar.

That's why Evam exists. Not to add features, but to start with the work itself: what a crew needs before arrival, what control needs to know and which steps shouldn't be there at all. Software that stays out of the way until it matters, built with the services that use it.

Products: Evam Mobile

One incident. A shared picture across every role. Different roles need different tools, but they shouldn't mean disconnected information.

Vehicle Services

In-vehicle MDT software and mobile CAD (MCAD). Navigation, incident information and communications in one intuitive experience. Cloud-powered. Ready when offline. **Modules:** Navigation, Incident, Info, Chat, Street, Command and Coms.

Central Services

Incident information, maps, status and communication on iOS, Android and the web, for responders, commanders and the teams coordinating them. **Modules:** Incident, Status, Map, Chat, Command, Info, Closures and Settings.

Both are MCX-ready, built with next-generation public-safety broadband and mission-critical communications in mind. Evam connects with your CAD and relevant information sources.

Security and compliance

- **Certified:** ISO 27001, ISO 9001, ISO 14001, Cyber Essentials and Cyber Essentials Plus.
- **Regional hosting:** align your deployment with your organisation's data-residency requirements.
- **Single Sign-On:** Central Services supports SSO through compatible identity providers.
- **Monitored:** Evam's services are monitored 24 hours a day, 365 days a year.

Markets

Evam is active on a global market, working with fire and rescue, ambulance and police services.
