

ePureFlo Water Pitcher

GET BETTER HYDRATION WITH A GREENER PRODUCT

ePureFlo Technology

-  **Sustainable:** Proprietary filtration technology using recycled coffee grounds
-  **2-stage Filtration Process:** Removes both large particles / sediments and smaller contaminants such as lead, chlorine and PFAS
-  **Faster Flow Rate:** Uses new Active Carbon Fiber (ACF) for a better drinking experience
-  **Long-Lasting:** Each filter cleans 300 gallons of water and lasts 6 months
-  **Effective:** Removes lead, chlorine, PFAS and tested to meet NSF / ANSI standards

Product Features

- Uses BPA-free, food grade plastics and recycled materials
- Includes a filter reminder timer to ensure timely filter replacement
- 2 size options: 6 cups and 8 cups

Why Coffee Grounds?

Greener

- 60 million tons of coffee grounds are used each year globally
- 75% of used coffee grounds go into landfill and produce greenhouse gases during decomposition
- Reusing coffee grounds in filters reduces landfill and greenhouse gas emissions while also preserving natural resources (i.e. coconuts and trees)

Cleaner

- Less energy is required during the production process
- Acid-wash is not needed, unlike other sources of carbon
- 60-70% more effective for PFAS filtration
