Title of Extended Abstract

[Provide the translated title here]

Keywords: Keyword 1, Keyword 2, Keyword 3, Keyword 4, Keyword 5

[Indicate which language you are submitting in: English or Greek. This determines your "Extended Abstract" below; the translation—if provided—goes under "Translation". For more information, scroll down to the appropriate section or visit our Accessibility page ↗.]

Extended Abstract

[Insert your extended abstract text here. The abstract should clearly state the paper's thesis, contribution to the conference theme, and selected track. The abstract should be a maximum of 1,000 words, excluding title, keywords, figure captions, and bibliography. Use 12-point Times New Roman font, double-spaced, with 1-inch margins on all sides. Do not include author names, affiliations, or identifying information anywhere in this document, including file metadata. A prose quotation of five or more lines should be "blocked", indented and single-spaced (use Style > Block).

> Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat. Duis aute irure dolor in reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum (Doe, 2026)

Do not include punctuation between the author's last name and the year for in-text, parenthetical citations (Doe 2026); place a comma between the year and page numbers when used in parenthetical citation (Doe 2026, 32); place author-date citations before a mark of punctuation

whenever possible (32). Please distinguish between authors and works. While "in Foucault 1984a" is technically permissible, "Foucault's (1984a) work suggests…" is preferred. A semicolon should be used to separate two or more references in a single parenthetical citation (Doe 2026; Smith 1983). Footnotes can be used to supplement the Author-Date references style to provide additional relevant commentary and/or to cite sources that do not readily lend themselves to the Author-Date References system.[1]]

Translation

[If you are providing your own translation, paste it below. This is strongly encouraged, as it gives you full control over how your work reads in the second language. If you prefer the conference team to handle the translation, leave this section blank; it will be translated using a hybrid of AI-assisted tools and human review ahead of the double-blind review process. Do not translate footnotes, captions, bibliography or disclaimers. Only the translated abstract text belongs here. The translation does not count towards the 1000 words limit.]

Headings, Figures & Tables

Headings

1. Use headings to organize your abstract into clear sections, such as Introduction, Methodology, Results and Discussion, and Conclusion.

[1] Here is a Footnote example

2. If you include figures or tables, provide a brief description for each visual aid. The description should explain what the image shows, highlight key features, and provide any necessary context for understanding its significance.
3. Keep the image descriptions concise and focused on the most relevant details. Aim for 1-2 sentences per description.
4. Ensure that all figures and tables are properly labeled and referenced within the text of your abstract.

Images & Figures

1. Images and figures should be of high quality, with a minimum resolution of 300 DPI.
2. **If accepted,** you will be asked to hand in any diagrams or vector visuals in .svg, .pdf or .ai format.
3. They should be legible and clear, with easily distinguishable elements.
4. Images and figures should be directly relevant to the research and support the arguments or findings presented in the abstract.
5. Captions should be provided for each image or figure, describing what it shows and its significance to the research, flush left on the line below the figure.
6. Images and figures should be numbered consecutively (e.g., Figure 1, Figure 2) and referenced within the text.

Image Rights & Permissions

- Authors are responsible for obtaining necessary permissions for any images, figures, or tables used in their extended abstracts.

- If using images from published sources, obtain permission from the copyright holder and provide proper attribution, including the author, source, and license or permission details.
- For original images created by the author(s), indicate that the image is original and created by the author(s).
- If using images licensed under Creative Commons or other open-source licenses, provide the appropriate attribution and license information.
- Ensure that all images comply with the conference's publication and copyright guidelines.

Tables

Table 1: Example

1. Tables should be used to present complex data or information in a structured and easily readable format.
2. They should be well-organized, with clear headers and labels for each column and row.
3. Tables should enhance the understanding of the data and support the arguments or findings presented in the abstract.
4. Tables should be created using the built-in table tools in Microsoft Word or similar word processing software.

5. If using specialized software to create figures or tables, ensure that they are embedded in the document or provided as separate files in a widely accessible format.
6. Captions should be provided for each table, describing its contents and significance to the research. See Styles > Caption
7. Tables should be numbered consecutively (e.g., Table 1, Table 2) and referenced within the text.

Bibliography

[Insert your bibliography here, using the Chicago Manual of Style (17th edition, author-date)↗.

Use 12-point Times New Roman font, single-spaced, with hanging indents.]

AI Disclosure

Authors must disclose if AI tools have been used in the production of any part of the submission text. Undeclared use of AI may result in the submission being rejected.

Track

If you are submitting to a specific track or more (up to 2), please indicate it here. Otherwise, please note “Other”. Tracks include:

1. Genealogies of the Model: Between World and Representation
2. The Model as Research: Contemporary Practices & Experiments
3. The Materiality of the Model: Geology, Infrastructure and Ecological Footprint
4. Functions and Control of the Model: Simulation, Prediction, Governance
5. From the Globe to the Planet, and the In-Between: Modeling the Scale of the World
6. The Aesthetics of Computational Worlds: Images, Immersion, Immediacy
7. Models of Unworlding: Practices of Unmaking and Re-creation
